ECP150 Series

AC-DC Power Supplies

XP Power

150 Watts

- 100 W Convection-cooled
- 150 W Forced-cooled
- 2" x 4"Foot Print
- Single Outputs from 12 V to 48 V
- Built-in Fan Supply
- <0.5 W No Load Input Power
- 3 Year Warranty

GREEN XP POWER

Dimensions:

ECP150:
4.00 x 2.00 x 1.16" (101.6 x 50.8 x 29.5 mm)

The ECP150 series minimises the no load power consumption and maximises efficiency to facilitate equipment design to meet the latest environmental legislation. Approved for medical and ITE applications, this range of single output AC/DC power supplies are packaged in a low profile 1.26" height with a foot print of just 2.0" by 4.0". The ECP150 provides up to 150W force-cooled or 100W convection-cooled leading to very high power densities of 14.9W/in^3 or 9.9W/in^3 respectively. A 12V, 500mA fan supply is included in the design.The power supply contains two fuses and low leakage currents as required by medical applications and is safety approved to operate in a 70 °C ambient.The low profile and safety approvals covering ITE and medical standards along with conducted emissions meeting EN55011/22 level B allow the versatile ECP150 series to be used in a vast range of applications.

Notes

1. Requires 10 CFM.
2. Measured with 20 MHz bandwidth and 10 µF electrolytic capacitor in parallel with 0.1 µF ceramic capacitor
3. Minimum average efficiencies measured at 25%, 50%, 75% & 100% of 150 W load and 230 VAC input.

Thermal Considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow). See Mechanical Details for component locations.

Temperature Measurements (At Maximum Ambient)	
Component	Max Temperature °C
TR1 Coil	110°C
L4 Coil	120°C
Q1 Body	120°C
Q2 Body	120°C
C1	105°C
C20	105°C

Service Life

The estimated service life of the ECP150 is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of a key capacitor with in the product when installed by the end application,

The graph below expresses the estimated lifetime of a given component temperature and assumes continuous operation at this temperature.
