

# Technical Information

## Compact thermometer

### Easytemp TMR31, TMR35

For general (TMR31) or hygienic applications (TMR35), with Pt100, class A sensor and 4-wire connection

Optionally with integrated 4 to 20 mA transmitter, PC programmable

#### Applications

- Designed for universal use in general or hygienic applications in the Food & Beverages and Life Sciences industries. Preferred installation locations include compact vessels and pipes - anywhere a compact thermometer design with short immersion lengths and reliable measurement offers additional advantages.
- Measuring range: -50 to +150 °C (-58 to +302 °F), with extension neck up to 200 °C (392 °F)
- Pressure range: up to 100 bar (1 450 psi)
- Protection class: IP69K
- Output
  - Without electronics: Pt100 (4-wire connection)
  - With electronics: 4 to 20 mA

#### Your benefits

Quick installation and easy commissioning:

- Small, compact design, made entirely of stainless steel
- M12 connection with IP69K protection for easy electrical connection
- Pt100, 4-wire connection or PC-programmable transmitter with 4 to 20 mA output
- Can also be ordered with preconfigured measuring range
- Variable installed lengths from 40 to 600 mm (1.57 to 23.6 in)

Outstanding measurement properties thanks to innovative sensor technology:

- Extremely short response times
- Very accurate even with short immersion lengths
- Thinfilm sensor element Pt100, accuracy class A (IEC 60751)

Safe operation with certificates and approvals:

- Device safety according to EN 61010-1
- Electromagnetic compatibility as per NAMUR NE21
- Failure information in the event of sensor break or sensor short circuit, configurable according to NAMUR NE43
- TMR35: hygiene-compliant design with 3-A mark, EHEDG certification, ASME BPE conformity, FDA, EC 1935/2004, EN 2023/2006, TSE/ADI
- Marine approval according to DNV GL

	Hazardous area		Safe area (non-hazardous area)

## Function and system design

### Measuring principle

#### Resistance thermometer (RTD):

This insert uses a Pt100 according to IEC 60751 as the temperature sensor. The temperature sensor is a temperature-sensitive platinum resistor with a resistance of 100  $\Omega$  at 0 °C (32 °F) and a temperature coefficient  $\alpha = 0.003851 \text{ } ^\circ\text{C}^{-1}$ .

#### Thin film resistance sensors (TF):

A very thin, ultrapure platinum layer, approx. 1  $\mu\text{m}$  thick, is vaporized in a vacuum on a ceramic substrate and then structured photolithographically. The platinum conductor paths formed in this way create the measuring resistance. Additional covering and passivation layers are applied and reliably protect the thin platinum layer from contamination and oxidation, even at high temperatures. The primary advantages of thin film temperature sensors are their smaller sizes and better vibration resistance.

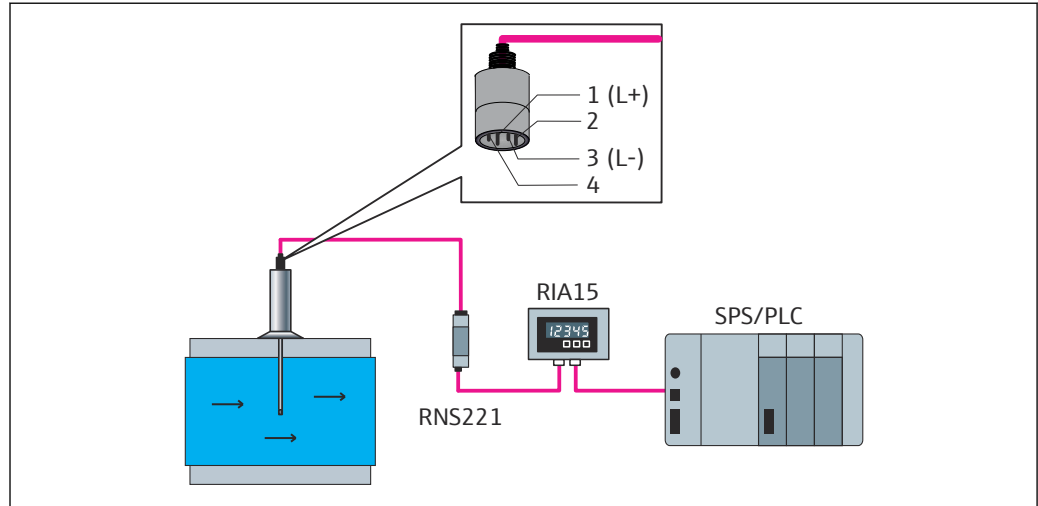

### Measuring system

The compact thermometer measures the process temperature with a Pt100 sensor element (class A, 4-wire). An optional built-in transmitter converts the Pt100 input signal to an 4 to 20 mA output signal.

A broad portfolio of optimized components for the temperature measuring point is available to ensure seamless integration of the measuring point:

- Power supply unit/barrier
- Display units
- Overvoltage protection

 For more detailed information, see the brochure "System Products and Data Managers - Solutions for the loop (FA00016K/EN)."

A0045087

 1 M12 connection with 4 to 20 mA analog output

### Equipment architecture

Design	Options	
<p style="text-align: right; font-size: small;">A0044946</p>	1: Electrical connection, output signal	 <b>Your benefits:</b> <ul style="list-style-type: none"> <li>■ M12, 4-pin connector, reduced cost and effort, incorrect wiring is prevented</li> <li>■ Optimum protection, IP69K as standard</li> <li>■ Compact, integrated transmitter (4 to 20 mA)</li> </ul>
	2: Transmitter housing	
	3: Extension neck	Optionally available if process temperature is too high for the electronics
	4: Process connection →  16	Over 25 different versions for industrial and hygienic applications.
	5: Thermowell	<ul style="list-style-type: none"> <li>■ Versions with and without thermowell (insert in direct contact with process)</li> <li>■ Thermowell diameter 6 mm (0.25 in)</li> </ul>
	6: Insert with Pt100 (TF):	 <b>Your benefits:</b> <ul style="list-style-type: none"> <li>■ Minimization of necessary immersion length: better product protection thanks to improved process flow</li> <li>■ Excellent cost-performance ratio</li> <li>■ Insert: <math>\varnothing 3</math> mm (<math>\frac{1}{8}</math> in) or <math>\varnothing 6</math> mm (<math>\frac{1}{4}</math> in)</li> </ul>

## Input

**Measuring range** Pt100 (TF) according to IEC 60751

Without extension neck	-50 to +150 °C (-58 to +302 °F)
With extension neck	-50 to +200 °C (-58 to +392 °F)

Min. span = 10 K (18 °F)

## Output

Output signal	Sensor output	Pt100, 4-wire connection, class A
	Analog output	4 to 20 mA; variable measuring range

**Signal on alarm** The signal on alarm is generated if the measuring information is missing or not valid. In the 4 to 20 mA mode, the device transmits the failure information according to NAMUR NE43:

Underranging	Linear drop from 4.0 to 3.8 mA
Overranging	Linear increase from 20.0 to 20.5 mA
Failure e.g. sensor defective	<p>≤ 3.6 mA (<b>low</b>) or ≥ 21 mA (<b>high</b>) can be selected</p> <p>The <b>high</b> alarm setting can be set between 21.5 mA and 23 mA, thus providing the flexibility needed to meet the requirements of various control systems.</p>

**Load**

$R_{b \max} = (U_{b \max} - 10 \text{ V}) / 0.023 \text{ A}$  (current output)

The graph illustrates the maximum load capacity of the device as a function of the supply voltage. The load increases linearly from 250 Ω at 15.75 V to 610 Ω at 24 V. The supply voltage range is from 10 V to 30 V DC.

A0039780-EN

**Linearization/transmission behavior** Temperature - linear

## Power supply

Supply voltage	$U_b$	10 to 35 V <sub>DC</sub>
----------------	-------	--------------------------

- Power supply failure**
- To meet electrical safety according to CAN/CSA-C22.2 No. 61010-1 or UL 61010-1, the device may only be powered by a power supply unit with a limited energy electric circuit in accordance with UL/EN/IEC 61010-1 chapter 9.4 or Class 2 according to UL 1310, "SELV or Class 2 circuit".
  - Behavior in the event of overvoltage (> 30 V)  
The device works continuously up to 35 V<sub>DC</sub> without any damage. If the supply voltage is exceeded, the specified characteristics are no longer guaranteed.
  - Behavior in the event of undervoltage  
If the supply voltage falls below the minimum value ~ 7 V, the device switches off in a defined manner (status as if not supplied with power).

**Electrical connection** According to the 3-A Sanitary Standard and the EHEDG, electrical connecting cables must be smooth, corrosion-resistant and easy to clean.

A0020176

2 Pin assignment, device plug

A Version with transmitter, M12 connector, 4-pin

B Version without transmitter, Pt100, 4-wire connection

1: Pin 1	Power supply 10 to 35 V <sub>DC</sub> Current output 4 to 20 Cable connection, wire color brown = BN
2: Pin 2	Connection of PC configuration cable - shortened pin Cable connection, wire color white = WH
3: Pin 3	Power supply 0 V <sub>DC</sub> Current output 4 to 20 Cable connection, wire color blue = BU
4: Pin 4	Connection of PC configuration cable - shortened pin Cable connection, wire color black = BK

**Input current required** ≤ 3.5 mA for 4 to 20 mA

**Maximum current consumption** ≤ 23 mA for 4 to 20 mA

**Switch-on delay** 2 s

**Overvoltage protection** To protect against overvoltage in the power supply and signal/communication cables for the thermometer electronics, the manufacturer offers the HAW562 surge arrester for DIN rail mounting.

 For more detailed information, see Technical Information HAW562 surge arrester (TI01012K).

## Performance characteristics

<b>Reference operating conditions</b>	<b>Adjustment temperature (ice bath)</b>	0 °C (32 °F) for sensor
	<b>Ambient temperature range</b>	25 °C ± 3 °C (77 °F ± 5 °F) for electronics
	<b>Supply voltage</b>	24 V <sub>DC</sub> ± 10 %
	<b>Relative humidity</b>	< 95 %

**Maximum measured error**

According to DIN EN 60770 and the reference conditions specified above. The measured error data correspond to  $\pm 2 \sigma$  (Gaussian distribution). The data include non-linearities and repeatability.

 |T| = Numerical value of the temperature in °C without regard to algebraic sign.

*Thermometer without electronics*

Standard	Designation	Measuring range	Measured error ME ( $\pm$ )	
			Maximum <sup>1)</sup>	Based on measured value <sup>2)</sup>
IEC 60751	Pt100 Cl. A	-50 to +200 °C (-58 to +392 °F)	0.55 K (0.99 °F)	ME = $\pm$ (0.15 K (0.27 °F) + 0.002 *  T )

- 1) Maximum measured error for the specified measuring range.
- 2) Deviations from maximum measured error possible due to rounding.

*Thermometer with electronics*

Standard	Designation	Measuring range	Measured error ( $\pm$ ) <sup>1)</sup>
IEC 60751	Pt100 Cl. A	-50 to +200 °C (-58 to +392 °F)	0.1 K (0.18 °F) or 0.08 %

- 1) Percentage refers to the set span. The larger value is valid.

*Total measured error of thermometer (sensor + electronics)*

Standard	Designation	Measuring range	Measured error ME ( $\pm$ ) <sup>1)</sup>
IEC 60751	Pt100 Cl. A	<ul style="list-style-type: none"> <li>▪ -50 to +150 °C (-58 to +302 °F) without extension neck</li> <li>▪ -50 to +200 °C (-58 to +392 °F) with extension neck</li> </ul>	ME = $\pm$ (0.25 K (0.48 °F) + 0.002 *  T )

- 1) Deviations from maximum measured error possible due to rounding.

**Long-term drift**

Electronics:  
 $\leq 0.1 \text{ K (0.18 °F)/year}$  or  $0.05 \text{ %/year}$

Data under reference operating conditions. % refers to the set span. The larger value is valid.

**Operating influences**

*The measured error data correspond to  $\pm 2 \sigma$  (Gaussian distribution).*

Ambient temperature	$T = \pm(15 \text{ ppm/K} * (\text{full scale value} + 200) + 50 \text{ ppm/K} * \text{set measuring range}) * \text{DT}$ DT = deviation of ambient temperature from the reference operating conditions
Supply voltage	$\leq \pm 0.01\%/V$ deviation from 24 V <sup>1)</sup>
Load	$\pm 0.02\%/100 \Omega$ <sup>1)</sup>

- 1) Specifications in percent refer to the full scale value of the measuring range

**Sensor response time**

Tests in water at 0.4 m/s (1.3 ft/s) according to IEC 60751; temperature changes in increments of 10 K. Response times measured for the version without electronics.

$t_{50}$	$t_{90}$
< 1 s	< 2 s

**Electronics response time**

Max. 1 s

 When recording step responses, it is important to bear in mind that the response times of the sensor might be added to the specified times.

**Sensor current**

$\leq 0.6 \text{ mA}$

**Calibration****Calibration of thermometers**

Calibration involves comparing the measured values of a device under test (DUT) with those of a more precise calibration standard using a defined and reproducible measurement method. The aim is to determine the deviation of the DUT's measured values from the true value of the measured variable. Two different methods are used for thermometers:

- Calibration at fixed-point temperatures, e.g. at the freezing point of water at 0 °C
- Calibration compared against a precise reference thermometer

The thermometer to be calibrated must display the fixed point temperature or the temperature of the reference thermometer as accurately as possible. Temperature-controlled calibration baths with very homogeneous thermal values, or special calibration furnaces into which the DUT and the reference thermometer, where necessary, can project to a sufficient degree, are typically used for thermometer calibrations.

**Sensor-transmitter-matching**

The resistance/temperature curve of platinum resistance thermometers is standardized but in practice it is rarely possible to keep to the values precisely over the entire operating temperature range. For this reason, platinum resistance sensors are divided into tolerance classes, such as class A, AA or B as per IEC 60751. These tolerance classes describe the maximum permissible deviation of the specific sensor characteristic curve from the standard curve, i.e. the maximum temperature-dependent characteristic error that is permitted. The conversion of measured sensor resistance values at temperatures in temperature transmitters or other meter electronics is often susceptible to considerable errors as the conversion is generally based on the standard characteristic curve.

When temperature transmitters are used, this conversion error can be reduced significantly by sensor-transmitter-matching:

- Calibration at least at three temperatures and determination of the actual temperature sensor characteristic curve
- Adjustment of the sensor-specific polynomial function using appropriate Calendar-van-Dusen (CvD) coefficients
- Configuration of the temperature transmitter with the sensor-specific CvD coefficients for resistance/temperature conversion, and
- another calibration of the reconfigured temperature transmitter with the connected resistance thermometer

The manufacturer offers this sensor-transmitter-matching as a separate service. Furthermore, the sensor-specific polynomial coefficients of platinum resistance thermometers are indicated on every calibration protocol where possible, e.g. at least three calibration points.

For the device, the manufacturer offers standard calibrations at a reference temperature of -50 to +200 °C (-58 to +392 °F) based on the ITS90 (International Temperature Scale). Calibrations in other temperature ranges are available from your local sales center on request. Calibrations are traceable to national and international standards. The calibration certificate is referenced to the serial number of the device.

## Mounting

**Orientation**

No restrictions. However, self-draining in the process must be guaranteed. If there is an opening to detect leaks at the process connection, this opening must be at the lowest possible point.

**Installation instructions**

The immersion length of the compact thermometer can considerably influence the accuracy. If the immersion length is too short, measurement errors can occur as a result of heat conduction via the process connection and the vessel wall. If installing in a pipe, the immersion length should ideally correspond to half of the pipe diameter.

Installation possibilities: pipes, tanks or other plant components.

A0012591

**3** Installation examples

- 1, 2 Perpendicular to flow direction, installed at a min. angle of 3° to ensure self-draining
- 3 On elbows
- 4 Inclined installation in pipes with a small nominal diameter
- L Insertion length

**i** The requirements of the EHEDG and the 3-A Sanitary Standard must be adhered to.

Installation instructions EHEDG/cleanability:  $L_t \leq (D_t - d_t)$

Installation instructions 3-A/cleanability:  $L_t \leq 2(D_t - d_t)$

**i** In the case of pipes with a small nominal diameter, it is advisable for the tip of the thermometer to project well into the process so that it extends past the pipe axis. Installation at an angle (4) could be another solution. When determining the immersion or insertion length, all the parameters of the thermometer and of the medium to be measured must be taken into account (e.g. flow velocity, process pressure).

A0040345

4 Detailed installation instructions for hygiene-compliant installation

- A Milk pipe connection according to DIN 11851, only in connection with EHEDG certified and self-centering sealing ring
- 1 Sensor with milk pipe connection
  - 2 Groove slip-on nut
  - 3 Counterpart connection
  - 4 Centering ring
  - 5 RO.4
  - 6 RO.4
  - 7 Sealing ring
- B Varivent® process connection for VARINLINE® housing
- 8 Sensor with Varivent connection
  - 9 Counterpart connection
  - 10 O-ring
- C Clamp according to ISO 2852
- 11 Gasket seal
  - 12 Counterpart connection
- D Process connection Liquiphant-M G1", horizontal installation
- 13 Weld-in adapter
  - 14 Vessel wall
  - 15 O-ring
  - 16 Thrust collar

#### NOTICE

The following actions must be taken if a sealing ring (O-ring) or seal fails:

- ▶ The thermometer must be removed.
- ▶ The thread and the O-ring joint/sealing surface must be cleaned.
- ▶ The sealing ring or seal must be replaced.
- ▶ CIP must be performed after installation.

In the case of weld-in connections, exercise the necessary degree of care when performing the welding work on the process side:

1. Use suitable welding material.
2. Flush-weld or weld with welding radius  $\geq 3.2$  mm (0.13 in).
3. Avoid crevices, folds or gaps.
4. Ensure the surface is honed and mechanically polished,  $R_a \leq 0.76$   $\mu\text{m}$  (30  $\mu\text{in}$ ).

Pay attention to the following when installing the thermometer to ensure that the cleanability is not affected:

1. The thermometer is suitable to be cleaned in built-in condition for CIP (cleaning in place). Cleaning is carried out in combination with tubing/piping or tank/vessel. Thermometers installed in tanks/vessels in combination with dead legs: Ensure with the installation of the cleaning instrument to spray directly the cleaning agent into the dead leg for cleaning out.
2. The Varivent® couplings enable flush-mount installation.

## Environment

<b>Ambient temperature range</b>	$T_a$	-40 to +85 °C (-40 to +185 °F)
<b>Storage temperature</b>	$T_s$	-40 to +85 °C (-40 to +185 °F)
<b>Operating altitude</b>	Up to 2 000 m (6 600 ft) above sea level	
<b>Climate class</b>	As per IEC/EN 60654-1, class C	
<b>Degree of protection</b>	As per IEC/EN 60529: IP67 with coupling and connecting cable (not evaluated by UL). Depends on the degree of protection of the connection cable. →  25	
<b>Shock and vibration resistance</b>	4g in the range from 2 to 150 Hz as per DIN EN 60068-2-6	
<b>Electromagnetic compatibility (EMC)</b>	<p>EMC to all relevant requirements of the IEC/EN 61326-series and NAMUR Recommendation EMC (NE21). For details, refer to the Declaration of Conformity.</p> <p>Maximum fluctuations during EMC-tests: &lt; 1 % of measuring span.</p> <p>Interference immunity to IEC/EN 61326-series, requirements for industrial areas</p> <p>Interference emission to IEC/EN 61326-series, electrical equipment Class B</p>	
<b>Electrical safety</b>	<ul style="list-style-type: none"> <li>▪ Protection class III</li> <li>▪ Overvoltage category II</li> <li>▪ Pollution level 2</li> </ul>	

## Process

**Process temperature range** The thermometer electronics must be protected against temperatures over 85 °C (185 °F) by an extension neck of the appropriate length.

### Device version without electronics

<b>Independent of the extension neck</b>	-50 to +200 °C (-58 to +392 °F)
--	---------------------------------

### Device version with electronics

<b>Without extension neck</b>	-50 to +150 °C (-58 to +302 °F)
<b>With extension neck</b>	-50 to +200 °C (-58 to +392 °F)

The following restrictions apply for the thermometer for general applications with a process connection, depending on the process connection and ambient temperature:

- If mounting with process connections with an adjustable insertion length, e.g. compression fitting with sealing taper, a corresponding extension neck length must be taken into consideration when installing. →  22
- Ambient temperatures must be taken into consideration

Maximum ambient temperature	Maximum process temperature	
	Without extension neck	With extension neck length 35 mm (1.38 in)
≤ 25 °C (77 °F)	150 °C (302 °F)	200 °C (392 °F)
≤ 40 °C (104 °F)	135 °C (275 °F)	180 °C (356 °F)

Maximum ambient temperature	Maximum process temperature	
	Without extension neck	With extension neck length 35 mm (1.38 in)
≤ 60 °C (140 °F)	120 °C (248 °F)	160 °C (320 °F)
≤ 85 °C (185 °F)	100 °C (212 °F)	133 °C (271 °F)

**Process pressure range**

The maximum possible process pressure depends on various influencing factors, such as the design, process connection and process temperature. Maximum possible process pressures for the individual process connections. →  16

 5 Maximum permitted process pressure

*L* Insertion length

*p* Process pressure

The diagram not only considers the overpressure but also the pressure load caused by the flow, wherein a safety factor of 1.9 has been specified for operation with flow. The maximum permitted static operating pressure is lower for longer insertion lengths due to the increased bending load caused by the flow. The calculation assumes the maximum permitted flow velocity for the respective insertion length (see the diagram below).

6 Permitted flow velocity depending on the insertion length

L Insertion length during flow

v Flow velocity

A Medium: water at  $T = 50\text{ }^{\circ}\text{C}$  ( $122\text{ }^{\circ}\text{F}$ )

B Medium: superheated steam at  $T = 200\text{ }^{\circ}\text{C}$  ( $392\text{ }^{\circ}\text{F}$ )

The permitted flow velocity is the minimum from the resonance velocity (resonance distance 80%) and the load or buckling caused by flow, which would result in the failure of the thermometer tube or the undershooting of the safety factor (1.9). The calculation was performed for the specified limit operating conditions of  $T = 200\text{ }^{\circ}\text{C}$  ( $392\text{ }^{\circ}\text{F}$ ) and process pressure  $p \leq 100\text{ bar}$  ( $1450\text{ psi}$ ).

**i** It is possible to verify the mechanical loading capacity as a function of the installation and process conditions using the online TW Sizing Module for thermowells in the Endress+Hauser Applicator software. → 22

**Medium - state of aggregation**

Gaseous or liquid (also with high viscosity, e.g. yogurt).

ØH Sleeve diameter 18 mm (0.71 in)

Item	Version
A	Shortened sleeve (without built-in transmitter, without extension neck), with 1" clamp process connection (example for minimum length)
B	Without extension neck, process connection Varivent F
C	Without extension neck, process connection according to DIN 11851
D	With extension neck 35 mm (1.38 in), with APV-INLINE process connection (example for maximum length)
E	Shortened sleeve (without built-in transmitter, without extension neck), process connection metal sealing system for hygienic processes, G½" thread. Suitable welding boss available as an accessory.
F	Shortened sleeve (without built-in transmitter, without extension neck), process connection for hygienic processes, G¾" or G1" thread, material 316L (1.4404). Suitable Liquiphant weld-in adapter available as an accessory.

Item	Version
G	Shortened sleeve (without built-in transmitter), with extension neck, insertion length 83 mm (3.27 in)
H	With extension neck, insertion length 38 mm (1.5 in)

**Weight** 0.2 to 2.5 kg (0.44 to 5.5 lbs) for standard versions

**Material** The temperatures for continuous operation specified in the following table are only intended as reference values for use of the various materials in air and without any significant compressive load. The maximum operating temperatures can be reduced considerably in cases where abnormal conditions such as high mechanical load occur or in aggressive media.

Designation	Short form	Recommended max. temperature for continuous use in air	Features
AISI 316L (corresponds to 1.4404 or 1.4435)	X2CrNiMo17-13-2, X2CrNiMo18-14-3	650 °C (1 202 °F) <sup>1)</sup>	<ul style="list-style-type: none"> <li>■ Austenitic, stainless steel</li> <li>■ High corrosion resistance in general</li> <li>■ Particularly high corrosion resistance in chlorine-based and acidic, non-oxidizing atmospheres through the addition of molybdenum (e.g. phosphoric and sulfuric acids, acetic and tartaric acids with a low concentration)</li> <li>■ Increased resistance to intergranular corrosion and pitting</li> </ul>

1) Can be used to a limited extent up to 800 °C (1472 °F) for low compressive loads and in non-corrosive media. More information is available from the sales organization.

#### Surface roughness

Values for wetted surfaces:

Standard surface, mechanically polished <sup>1)</sup>	$R_a \leq 0.76 \mu\text{m}$ (30 $\mu\text{in}$ )
Mechanically polished <sup>1)</sup> , buffed <sup>2)</sup>	$R_a \leq 0.38 \mu\text{m}$ (15 $\mu\text{in}$ )
Mechanically polished <sup>1)</sup> , buffed and electropolished	$R_a \leq 0.38 \mu\text{m}$ (15 $\mu\text{in}$ ) + electropolished

1) Or equivalent treatment that guarantees  $R_a$  max

2) Not compliant with ASME BPE

#### Process connections for hygienic applications

All dimensions in mm (in).

<p>Spring-loaded cap-nut</p>  <p>A0044937</p>	G3/8" thread for mounting in a thermowell	-

**Thermowell design, dimensions**

Thermometer for hygienic applications

16 Thermowell for connection to the compact thermometer with spring-loaded cap-nut and G3/8" thread. Dimensions in mm (in)

- 1 Cylindrical thermowell, TL = 70 mm (2.76 in), option WA or 85 mm (3.35 in), option WB, with 3-A<sup>®</sup> symbol, P<sub>max.</sub> = 250 bar (3 626 psi) with maximum flow velocity of 40 m/s (131 ft/s)
- 2 Thermowell, metal-to-metal seal, P<sub>max.</sub> = 16 bar (232 psi)

**Human interface**

**Local operation**

There are no operating elements directly on the device. The temperature transmitter is configured via remote operation.

<b>Local display</b>	There are no display elements directly on the device. The measured value and diagnostic messages, for instance, can be accessed via the interface with PC software.
<b>Remote operation</b>	Configuration via configuration set TXU10, for PC-programmable thermometer - with setup software (ReadWin 2000) and interface for PC with USB port.  The software can be downloaded free of charge from the following website: <a href="http://www.endress.com/readwin">www.endress.com/readwin</a>

## Certificates and approvals

<b>CE mark</b>	The product meets the requirements of the harmonized European standards. As such, it complies with the legal specifications of the EC directives. The manufacturer confirms successful testing of the product by affixing to it the CE-mark.
<b>EAC mark</b>	The product meets the legal requirements of the EEU guidelines. The manufacturer confirms the successful testing of the product by affixing the EAC mark.
<b>Hygiene standard</b>	<ul style="list-style-type: none"> <li>▪ EHEDG certification, type EL CLASS I. EHEDG certified/tested process connections. →  16</li> <li>▪ 3-A Authorization No. 1144, 3-A Sanitary Standard 74-07. Listed process connections. →  16</li> <li>▪ ASME BPE, certificate of conformity can be ordered for indicated options</li> <li>▪ FDA-compliant</li> <li>▪ All surfaces in contact with the medium are free from materials derived from bovine animals or other livestock (ADI/TSE)</li> </ul>
<b>Food/product contact material (FCM)</b>	The food/product contact material of the thermometer meets the following European regulations: <ul style="list-style-type: none"> <li>▪ (EC) No. 1935/2004, Article 3, paragraph 1, Articles 5 and 17 on materials and articles intended to come into contact with food.</li> <li>▪ (EC) No. 2023/2006 on good manufacturing practice for materials and articles intended to come into contact with food.</li> <li>▪ (EC) No. 10/2011 on plastic materials and articles intended to come into contact with food.</li> </ul>
<b>Schiffbauzulassung</b>	Information on the Type Approval Certificates currently available (DNVGL, BV, etc.) can be obtained from the sales organization.
<b>Other standards and guidelines</b>	<ul style="list-style-type: none"> <li>▪ IEC 60529: Degrees of protection provided by enclosures (IP code)</li> <li>▪ IEC/EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use</li> <li>▪ IEC/EN 61326 series: Electromagnetic compatibility (EMC requirements)</li> </ul>
<b>Material certification</b>	The material certificate 3.1 (according to EN 10204) can be requested separately. The short form certificate includes a simplified declaration with no enclosures of documents related to the materials used in the design of the individual sensor, but guarantees the traceability of the materials through the identification number of the thermometer. The data regarding the origin of the materials can subsequently be requested by the client if necessary.
<b>Calibration</b>	The factory calibration is performed according to an internal procedure in a laboratory of the manufacturer that is accredited by the European Accreditation Organization (EA) according to ISO/IEC 17025. A calibration which is performed according to EA guidelines (SIT/Accredia or DKD/DAkKS) can be requested separately. The calibration is performed on the replaceable insert of the thermometer. In the case of thermometers without a replaceable insert, the entire thermometer - from the process connection to the tip of the thermometer - is calibrated.
<b>UL approval</b>	More information under UL Product iq™, search for keyword "E225237")

## Ordering information

Detailed ordering information is available for your nearest sales organization [www.addresses.endress.com](http://www.addresses.endress.com) or in the Product Configurator under [www.endress.com](http://www.endress.com) :

1. Click Corporate
2. Select the country
3. Click Products
4. Select the product using the filters and search field
5. Open the product page

The Configuration button to the right of the product image opens the Product Configurator.

### Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

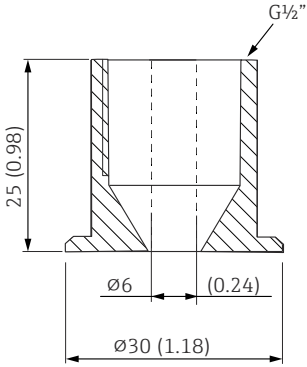

## Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: [www.endress.com](http://www.endress.com).

All dimensions in mm (in).

<ul style="list-style-type: none"> <li>▪ PVC cable, 4 x 0.34 mm<sup>2</sup> (22 AWG) with M12x1 coupling nut made of epoxy coated zinc, straight socket contact, screw plug, 5 m (16.4 ft)</li> <li>▪ IP67 degree of protection</li> <li>▪ Order number 71217708</li> <li>▪ Voltage: max. 250 V</li> <li>▪ Current carrying capacity: max. 4 A</li> <li>▪ Temperature: -20 to 105 °C</li> </ul> <p>Wire colors:</p> <ul style="list-style-type: none"> <li>▪ 1 = BN brown</li> <li>▪ 2 = WH white</li> <li>▪ 3 = BU blue</li> <li>▪ 4 = BK black</li> </ul>	 <p style="text-align: right;">A0020725</p>

Accessories	Description
<p>Configuration kit for PC-programmable transmitters - setup program and interface cable (4-pin connector) for PC with USB port + adapter for compact thermometer with M12x1 thread</p> <p>Order code: TXU10</p>	 <p style="text-align: right;">A0028635</p>

Service-specific accessories

Accessories	Description
<p>Applicator</p>	<p>Software for selecting and sizing Endress+Hauser measuring devices:</p> <ul style="list-style-type: none"> <li>▪ Calculation of all the necessary data for identifying the optimum measuring device: e.g. pressure loss, accuracy or process connections.</li> <li>▪ Graphic illustration of the calculation results</li> </ul> <p>Administration, documentation and access to all project-related data and parameters over the entire life cycle of a project.</p> <p>Applicator is available: Via the Internet: <a href="https://portal.endress.com/webapp/applicator">https://portal.endress.com/webapp/applicator</a></p>

Accessories	Description
Configurator	<p>Product Configurator - the tool for individual product configuration</p> <ul style="list-style-type: none"> <li>▪ Up-to-the-minute configuration data</li> <li>▪ Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language</li> <li>▪ Automatic verification of exclusion criteria</li> <li>▪ Automatic creation of the order code and its breakdown in PDF or Excel output format</li> <li>▪ Ability to order directly in the Endress+Hauser Online Shop</li> </ul> <p>The Configurator is available on the Endress+Hauser website at: <a href="http://www.endress.com">www.endress.com</a>                      -&gt; Click "Corporate" -&gt; Select your country -&gt; Click "Products" -&gt; Select the product using the filters and search field -&gt; Open product page -&gt; The "Configure" button to the right of the product image opens the Product Configurator.</p>
Accessories	Description
W@M	<p>Life cycle management for your plant</p> <p>W@M offers assistance with a wide range of software applications over the entire process: from planning and procurement to the installation, commissioning and operation of the measuring devices. All the relevant information is available for every measuring device over the entire life cycle, such as the device status, device-specific documentation, spare parts etc.</p> <p>The application already contains the data of your Endress+Hauser device. Endress+Hauser also takes care of maintaining and updating the data records.</p> <p>W@M is available:                      Via the Internet: <a href="http://www.endress.com/lifecyclemanagement">www.endress.com/lifecyclemanagement</a></p>

**System components**

Accessories	Description
RIA16 field indicator	<p>The field indicator presents the analog measuring signal on the display. The LC display shows the current measured value in digital form and as a bar graph indicating a limit value violation. The indicator is looped into the 4 to 20 mA circuit and gets the required energy from there.</p> <p> For details, see Technical Information TI00144R</p>
Accessories	Description
RIA15 field indicator	<p>Field indicator for integration into 4 to 20 mA, panel mounting</p> <p> For details, see Technical Information TI00143K</p>
Accessories	Description
RIA14 field indicator	<p>Field indicator for integration into 4 to 20 mA, optionally with Ex d approval.</p> <p> For details, see document TI00143R</p>
Accessories	Description
RN221N	<p>Active barrier with power supply for safe separation of 4 to 20 mA standard signal circuits.</p> <p> For details, see Technical Information TI00073R and Operating Instructions BA00202R</p>
Accessories	Description
RNS221	<p>Supply unit for powering two 2-wire measuring devices solely in the non-Ex area.</p> <p> For details, see Technical Information TI00081R and Brief Operating Instructions KA00110R</p>
