SFP MODULES – OVERVIEW

SFPs, SFP+s and XFPs are compact transceivers that function as modular connectors. Available for copper (RJ-45) and all common fiber modes, wavelengths and data rates, these modules allow network operators to connect different interface types to the same network equipment via an SFP, SFP+ or XFP port. The cost of cable upgrades is greatly reduced, preserving the networking equipment investment – all for the price of a relatively inexpensive module.

More and more network equipment is being designed with SFP/SFP+/XFP ports to take advantage of the inherent flexibility and eliminate the guesswork and uncertainty of expensive equipment purchases. Remember to select an SFP, SFP+ or XFP to match the speed of your designated port. All modules from Advantech B+B SmartWorx carry a limited lifetime warranty.

Standard Diagnostics

All SFP modules report standard information, such as:

- SFP/XFP Type
- Fiber Link Length
- Wavelength
- Bit Rate
- Date Code

DDMI/Extended Diagnostics

Complying with SFF-8472, IE-SFP modules that include Extended Diagnostics also report information, such as:

- Temperature
- Voltage
- Bias Current
- TX Power
- RX Power
