Specifications

Light Source

Visible red LED (630 nm), Infrared (880 nm), Blue (470 nm), White (5500 K), or Green

Supply Voltage and Current

24 V dc \pm 10% 500 mA maximum, 125 mA maximum for 50 mm models. Direct connect to *PresencePLUS* P4 sensor operating at 24 V dc only

Construction

Housing: aluminum with black anodizing
 Beam Splitter: optical glass with optical coatings on both sides
 Diffuser: high-precision cast acrylic
 Dust Cover: optical glass with broadband anti-reflective coating (425 nm to 675 nm) (some models)

Useful Life

When operated within specifications, output will decrease less than 20% after 10,000 hours and less than 30% after 20,000 hours (based on continuous operation). NOTE: Actual useful life of strobed lights depends on duty cycle.

Operating Conditions

Temperature: 0 °C to +50 °C (+32 °F to +122 °F)
 Humidity: 90% at +50 °C maximum relative humidity (non-condensing)

Cleaning Instructions

Handle the sensor with care during installation and operation. Sensor windows soiled by fingerprints, dust, water, oil, etc. may create stray light that may degrade the peak performance of the sensor. Blow the window clear using filtered, compressed air, then clean as necessary using a lens cloth and lens cleaner or window cleaner. Do not use any other chemicals for cleaning.

Installation

Before installing an on-axis light, it is recommended that the listed ambient light filter be installed behind the camera lens. The filter improves image quality by reducing unwanted ambient light.
