

9 Volt Rechargeable Batteries Sealed Nickel-Metal Hydride Cylindrical Rechargeable Battery Cells

RS Stock No. 199-646

Type 9 V (8.4V), 200 mAh

| No set sel Mellere | | 0.41/ | |
|---------------------------|-----------------|---|--|
| Nominal Voltage | 8.4V | | |
| Capacity | Typical | 200 mAh/0.2 CmA | |
| | Minimum | 160 mAh/0.2 CmA | |
| Charge | Standard | 0.1 CmA for 16 hrs. | |
| | | 1.0 CmA for | |
| | Rapid | 1.2hrs.(approx.) | |
| | | (With- Δ V = 35 $^{\sim}$ 70mV, Temp., | |
| | | Time charging control) | |
| | Trickle | 0.03 CmA (1 month) | |
| Maximum Discharge Current | | 1.0 CmA | |
| Discharge Cut-off Voltage | | 7.0 V | |
| Cycle Life | | 500 cycles | |
| Applicable | Standard Charge | 0~+45°C | |
| | Rapid Charge | 0~+40°C | |
| Temperature | Discharge | -10~+60°C | |
| | Within one year | -20°C~+35°C | |
| Storage | Within 3 months | -20°C~+45°C | |
| | Within 1 month | -20°C~+55°C | |
| Relative Humidity Range | | 65%±20% | |
| | | L = 48.4 mm max | |
| Dimension | | W= 26.2 mm max. | |
| | | H = 17.4 mm max. | |
| Weight | | Approx. 32.0 g | |

2. Performance:

Unless otherwise stated, tests should be done within 45 days of delivery under the following Conditions:

Ambient Temperature, Ta: 20 + 5°C Standard Charge / Discharge Condition

Relative Humidity : 65 + 20% RH Charge : 0.1 CmA x 16 hours

Discharge: 0.2 CmA to 1.0 V/cell

| Test Item | Test Method | Performance | Remarks |
|---|---|---|----------------------------|
| Capacity | Standard Charge Standard Discharge | No less than rated capacity | Up to 3 cycles are allowed |
| High Rate Discharge (1.0CmA) | Standard Charge 1 hour rest before discharge | No less than 85% of rated capacity | |
| Low Temperature Discharge | Discharge at 0.2CmA in 0 ± 2°C for 16~24 hours stand after a standard charge | No less than 80% of rated capacity | |
| Terminal Voltage Open Circuit Voltage | Within 1 hour after standard charge | No less than 1.31V/cell in terminal voltage | |
| Cycle Life | IEC 285 (1993) 4.4.1 | Over 500 cycles | See Note:1 |
| Charge Retention | Standard Charge Storage 28 days at 20 <u>+</u> 2°C Standard Discharge | No less than 75% of rated capacity | |
| Overcharge | Charge at 0.1CmA for 48 hours Standard Discharge | No less than rated capacity | |
| Over-discharge | Standard Charge Discharge at 2.0CmA to 1.0 V/cell Over-discharge at 1.0CmA for 1 hour | The cell shall not explode The safety valve of the cell shall operate | |
| Vibration Amplitude Frequency Direction and Time | 3.6mm peak to peak 1000 cpm Arbitrary direction / 1 hour | The cell shall be normality in appearance No less than 1.2V/cell in terminal voltage. | |

| Test Item | Test Method | Performance | Remarks |
|--|---|---|---------|
| Shock Dropping Distance Shock Board Dropping Time | 0.45 m (spontaneous dropping) Hard wood (Thickness: over 10 mm) Arbitrary direction / 3 times | The cell shall be normality in appearance No less than 1.2Vcell in terminal voltage | |
| Leakage | Standard Charge Storage : 14 days in 33 <u>+</u> 5°C and 80 <u>+</u> 5% RH | The cell shall have no visible leakage | |
| Short Circuit | After standard charge, short circuit by 2 mm Ni-tab for 1 hour | Leakage and deformation may occur, but no explosion is allowed | |

3. Safety Requirement for User

Please keep in mind the following points when operating, designing, or manufacturing your equipment.

- 1. Avoid short-circuiting of the battery. Do not connect the positive and the negative terminals with a wire or other metal items, as this will cause a large flow of current through the battery. It may damage the battery.
- 2. Do not attempt to take the battery apart or subject to pressure or impact. The parts of the battery will be damaged, when the battery has ruptured, heat may be generated or fire may result. The alkaline electrolyte may harm the skin or eyes or damage clothing upon contact.
- 3. Do not heat or incinerate the battery. The battery may swell or rupture and it may explode or release alkaline electrolyte.
- 4. Do not solder directly to the battery. It may damage the battery.
- 5. If any abnormally or problem is found while using the battery, stop its use, and bring it to your local dealer. Please do not attempt to fix or take the battery apart. It may cause dangerous to you.
- 6. Charge the battery only with a charger qualified by NEX*cell* or with a charger that meets our specified conditions. Charging without a proper control will cause overcharging and damage the battery. Overcharging can cause battery to capacity drop, short life, leakage, overheat, burst, or even catch fire.
- 7. Discharge cutoff at 1.0V per cell is required. However, 1.05V/cell cutoff voltage is suggested for multi-cell battery pack.
- 8. Do not operate the cells/battery packs in a sealed case. A pressure vent is required.

Note 1: IEC285 (1993) 4.4.1 Cycle life Test:

The battery is capable of 500 cycles under the following conditions:

| Cycle number | Charge | Rest | Discharge | |
|---|---------------------------|----------|---------------------------|--|
| 1 | 0.10CmA for 16 hrs | none | 0.25CmA for 2 hrs 20 mins | |
| 2~48 | 0.25CmA for 3 hrs 10 mins | none | 0.25CmA for 2 hrs 20 mins | |
| 49 | 0.25CmA for 3 hrs 10 mins | none | 0.25CmA to 1.0V/cell | |
| 50 | 0.10CmA for 16 hrs | 1-4hr(s) | 0.20CmA to 1.0V/cell | |
| Cycle 1 to 50 shall be repeated until the discharge duration on any 50 th cycle becomes less than 3 hrs. | | | | |

The actual cycle life depends on the operating temperature and cycling conditions.
