

FNP600/850/1000 AC-DC Power Supply

FNR-5-12G/FNR-5-48G Power Shelves

Key Features & Benefits

- RoHS lead free solder and lead solder exempted products are available
- High density front-ends 10.5 to 16.1 W/in³
- Universal input voltage range (90-264 VAC) with PFC
- 1U or 2U height configurations
- Droop current share with ORing FETs
- I²C interface status and control
- Standby voltage of 12 VDC @ 0.5 A
- Overtemperature, overload, and overvoltage protection
- Status LEDs: AC OK, DC OK, Overtemperature
- FNP850-12 model has airflow direction from front-to-rear or from rear-to-front (-12R model)
- ON/OFF Enable switch - shuts OFF Vo1; Vaux and fan are operational.

The FNP600/850/1000 power factor corrected (PFC) front ends provide (depending on model) either a 12 VDC or a 48 VDC output for telecom, datacom, and other distributed power applications. Their small 1U by 2U size allows for configurations of either height in hot-swap redundant systems while their internal fan and cooling design permits wide use with reliable operation.

Status is provided with front panel LEDs, logic signals, and via the I²C management interface bus. In addition, the I²C bus can enable the power supply, control fan speed, and on the 12 VDC models it allows for adjusting the output voltage from 7 to 12 VDC. This powerful feature allows the same power supply to be used in various applications where bus voltages driving isolated dc-dc converters and POL regulators may be different.

Also, the FNP850-12R is uniquely designed with airflow from the rear of the power supply to the front. This airflow direction supports those critical applications where space limitations and/or higher ambient temperatures near the rear of the rack system, prohibit the discharge of higher temperature airflow from regular front-to-rear cooled power supplies.

The FNP600/850/1000's meet international safety requirements and are CE marked to the Low Voltage Directive (LVD).

¹ Models with 5V and 3.3V standby voltages are also available. (Contact factory.)

² Primary 12V and 48V outputs have built-in droop regulation.

³ Maximum peak-to-peak noise expressed as a percentage of output voltage; 20 MHz bandwidth.

⁴ FNP850-12R model has airflow from rear to front.

	FNP1000-48	Current limit. 48V output:	22	23	25	A
		12V Standby output:	0.75		1.75	A
Short-Circuit Protection	Power supply recovers when short is removed.					
Overtemperature/ Fan Failure Warning	FNP 12V or 48V Vo1 supply output will shut down in the event of an overtemperature condition or blocked fan rotor. Supply's fan and Vaux are active. Power supply will recover when OT condition is removed. Amber OT LED will turn ON to indicate fault condition.					
	OT/Fan Fail is an open-collector signal with 20-mA pull-down. High signal indicates a normal operating condition. Output will go low at least 100 ms before OT condition shuts down the power supply. Internally pulled up to 5V with a 5.1 kΩ resistor. Note. ²					

¹ FNP1000-48 overvoltage protection range is 56 V minimum and 60 V maximum.

² A pull-up to 3.3V can be achieved by terminating the logic signal with a 10 kΩ resistor to logic ground.

Control and Monitoring

PARAMETER	CONDITIONS/DESCRIPTION	MIN	NOM	MAX	UNITS
DC OK	TTL open-collector signal with active 20-mA pull-down. Represents percent of output voltage where signal is OK. Below this voltage, a signal high condition indicates an output which is out of tolerance. Green DC OK LED on front panel indicates normal operation ¹ . Internally pulled up to 5V with a 5.1 kΩ resistor. Note. ²	90		110	%
Input Power Fail Warning	TTL open-collector signal with active 20-mA pull-down. High indicates an input power fail. Power Fail Warning will turn OFF green AC OK LED. Represents the time after warning signal before Vout drops to 95% due to loss of input power. ¹ Internally pulled up to 5V with a 5.1 kΩ resistor. Note. ²	5			ms
Power Supply Present Signal	Resistance of connection to logic ground which allows user to determine if power supply is present. ¹		10		Ω
Current Share	Main output only. Difference in current between two supplies at >10% load value.	FNP600-12:		5	A
		FNP850-12:		7	
		FNP600-48:		2	
		FNP1000-48:		2	
Remote Sense	Total voltage compensation for cable losses with respect to the main output.			0.5	V
Output Enable	Open circuit or logic high from ENA pin to Vo1 RTN shuts OFF Vo1; Vaux and fan are operational. Logic low (2 mA sink capability) or jumper will turn ON Vo1 within 500 ms. Open circuit voltage on enable pin is 3.3 VDC. Externally applied voltage to the enable pin should NOT exceed 7 VDC. Signal is referred to as Logic Return (LRTN).				

¹ Also available on I²C data line.

² A pull-up to 3.3V can be achieved by terminating the logic signal with a 10 kΩ resistor to logic ground.

FNR-5-12G and FNR-5-48G Power Shelves

Each rack (power shelf) is 1U high with backplane and designed for up to five front-end models in parallel or in n+1 operation. Each power shelf has:

- Output terminals with two M4-screws on each power tab.
- Two fast-on contacts for system earthing.
- Address coding over five pole DIP switch on each unit, 37-pin D-Sub connector with I²C-lines, monitoring signals and support functions.
- Provides a start-up synchronization circuit and EMV filters.

Overall Mechanical Dimensions (W x H x D): 17.68" (449 mm) x 1.72" (43.6 mm) x 13.05" (331.5 mm)
