ABC450 Series AC-DC Open Frame Power Supplies

The ABC450 Series of open-frame power supplies, with its wide universal 90-264 VAC input range and high power density, is available at 450 W of output power and a variety of single and multiple output voltages.

The high efficiency and high power density of the ABC family ensures minimal power loss in end-use equipment, thereby facilitating higher reliability, easier thermal management and meets regulatory approvals for environmentally-friendly end products.

These power supplies are ideal for telecom, datacom, industrial equipment and other applications.

Key Features & Benefits

- 450 W (with airflow), 300 W (without airflow)
- 4.0 x 6.5 x 1.6 inch (101.6 x 165.0 x 41.0 mm)
- Universal AC Input
- 5 V s/b and 12 V Fan Outputs Standard
- Side Fan or Top Fan Mounting Option Product
- (–S or –T to be added to model number)
- Current Sharing Option Product
- (–I to be added to model number)
- Conducted EMI EN 55022-B, FCC Part 15 Level B
- ITE Safety Agency Approvals
- RoHS Compliant
- CE Marked LVD

Applications

- Instrumentation
- Lighting
- Industrial Applications
- Test and Measurement
- Robotics
- Renewable Energy
- Data Comm.
- Applied Computing
- Process Control
- Wireless

Warranty 2 years.

NOTES:

1. Peak current rating on V1 is 120% of max, lasting < 30 Sec with max of 10% duty cycle.
2. Combined output power of V1 plus fan supply and standby supply should not exceed max, power rating.
3. Fan supply output voltage tolerance including set point accuracy, line and load regulation is +/-30% and needs min. 1% load on V1 output to be within regulation band. Ripple and noise is less than 10%.
4. Ripple is peak to peak with 20MHz bandwidth and 10uF (Tantalum capacitor) in parallel with a 0.1uF ceramic capacitor at rated line voltage and load ranges.
5. Derate output power linearly to 80% from 90 Vac to 80 Vac input.
6. Standby output voltage tolerance including set point

Installation Instruction for Current Sharing

During the installation and setup of parallel supplies in a system it is important that a single remote sense point be used for all the supplies.

The remote sense voltage between the supplies must be adjusted to within 2% to ensure the supplies are inside the 3% capture window.

If the supplies are not initially adjusted inside the capture window the supplies will not current share.

NOTE:
"CURRENT SHARING " facility is inclusive with the unit only with ordering of the " CURRENT SHARING " option unit i.e. ABC450-1XXX-I or MBC450-1XXX-I.

Set-Up Procedure:

1. Connect load cables to the outputs of each supply.
2. Connect the remote sense lines to the load in twisted style. (A common remote sense point must be used for all the supplies in parallel).
3. Connect all the "current share" pins on the J3 connector between the supplies.
4. Adjust remote sense voltage of each supply to within 1% of rated output voltage or readjust to required set point. (Adjustment to be done with all other parallel supplies off).
5. Current sharing between the supplies can be verified by monitoring the output current of each supply with a hall effect DC current probe. The supplies should share to within 10% of the total load current.
