## Functions and Features

- 2 lines x 16 characters
- Built-in LCD comparable controller
- Parallel or serial MPU interface (Default 6800 MPU parallel)
- +3.0V or +5.0 V Power Supply
- RoHS compliant
- Size compatible to NHD-0216K1Z series Character LCDs

## Mechanical Drawing

The drawing contained herein is the exclusive property of Newhaven Display International, Inc. and shall not be copied, reproduced, and/or disclosed in any format without permission.

## Pin Description

Parallel Interface (default):

| Pin No. | Symbol | External <br> Connection | Function Description |
| :---: | :---: | :---: | :--- |
| 1 | VSS | Power Supply | Ground |
| 2 | VDD | Power Supply | Supply Voltage for OLED and logic |
| 3 | NC | - | No Connect |
| 4 | RS | MPU | Register select signal. RS=0: Command, RS=1: Data |
| 5 | R/W | MPU | Read/Write select signal, R/W=1: Read R/W: $=0:$ Write |
| 6 | E | MPU | Operation enable signal. Falling edge triggered. |
| $7-10$ | DB0 - DB3 | MPU | Four low order bi-directional three-state data bus lines. These four <br> are not used during 4-bit operation. |
| $11-14$ | DB4 - DB7 | MPU | Four high order bi-directional three-state data bus lines. |
| 15 | NC | - | No Connect |
| 16 | NC | - | No Connect |

Serial Interface:

| Pin No. | Symbol | External <br> Connection | Function Description |
| :---: | :---: | :--- | :--- |
| 1 | VSS | Power Supply | Ground |
| 2 | VDD | Power Supply | Supply Voltage for OLED and logic |
| $3-11$ | NC | - | No Connect |
| 12 | SCL | MPU | Serial Clock signal |
| 13 | SDO | MPU | Serial Data output signal |
| 14 | SDI | MPU | Serial Data input signal |
| 15 | NC | - | No Connect |
| 16 | /CS | MPU | Active LOW Chip Select signal |

## Jumper Selections

| MPU Interface | L_PS_H | J80_J68 | L_CS_H | JCS | L_SHL_H |

| "H" Level output | Voh |  | $0.8^{*}$ VDD | - | VDD | V |  |
| "L" Level output | Vol |  | VSS | - | 0.2 VDD | V |  |

## Optical Characteristics

| Item | Symbol | Condition | Min. | Typ. | Max. | Unit |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Viewing Angle - Top |  |  | 80 | - | - | ${ }^{\circ}$ |
| Viewing Angle - Bottom |  |  | 80 | - | - | ${ }^{\circ}$ |
| Viewing Angle - Left |  |  | 80 | - | - | 0 |
| Viewing Angle - Right |  |  | 80 | - | - | 0 |
| Contrast Ratio | Cr |  | $2000: 1$ | - | - | - |
| Response Time (rise) | Tr | - | - | 10 | - | us |
| Response Time (fall) | Tf | - | - | 10 | - | us |
| Brightness |  | $50 \%$ checkerboard | - | 125 | - | $\mathrm{cd} / \mathrm{m}^{2}$ |
| Lifetime |  | Ta=25 ${ }^{\circ} \mathrm{C}, 50 \%$ <br> checkerboard | 50,000 | - | - | Hrs |

Note: Lifetime at typical temperature is based on accelerated high-temperature operation. Lifetime is tested at average $50 \%$ pixels on and is rated as Hours until Half-Brightness. The Display OFF command can be used to extend the lifetime of the display.
Luminance of active pixels will degrade faster than inactive pixels. Residual (burn-in) images may occur. To avoid this, every pixel should be illuminated uniformly.

## Table of Commands

| Instruction | Code |  |  |  |  |  |  |  |  |  | Description | Max Execution Time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |  |  |
| Clear Display | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | Clears entire display. <br> Does not change DDRAM address. | 2 ms |
| Return Home | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | Sets DDRAM <br> Address to 0x00. <br> Returns shifted display to original position. | 600us |
| Entry Mode Set | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | I/D | S | Sets cursor to auto Increment or Decrement, and sets display shift. | 600us |
| Display ON/OFF control | 0 | 0 | 0 | 0 | 0 | 0 | 1 | D | C | B | Sets Display (D) ON/OFF. <br> Sets Cursor (C) ON/OFF. <br> Sets Blinking (B) of cursor ON/OFF. | 600us |
| Cursor/Displ ay Shift | 0 | 0 | 0 | 0 | 0 | 1 | S/C | R/L | 0 | 0 | Moves cursor \& shifts display without changing DDRAM contents. | 600us |
| Function Set | 0 | 0 | 0 | 0 | 1 | DL | 1 | 0 | FT1 | FTO | Set interface data length. <br> Select Font Table. | 600us |
| Set CGRAM address | 0 | 0 | 0 | 1 | ACG5 | ACG4 | ACG3 | ACG2 | ACG1 | ACGO | Move to CGRAM address. | 600us |
| Set DDRAM address | 0 | 0 | 1 | ADD6 | ADD5 | ADD4 | ADD3 | ADD2 | ADD1 | ADDO | Move to DDRAM address. | 600us |
| Read Busy <br>  <br> Address | 0 | 1 | BF | AC6 | AC5 | AC4 | AC3 | AC2 | AC1 | ACO | Read Busy Flag (BF) and Address Counter. | 600us |
| Write data to CGRAM or DDRAM | 1 | 0 | Write Data |  |  |  |  |  |  |  | Write data to CGRAM or DDRAM | 600us |
| Read data from CGRAM or DDRAM | 1 | 1 | Read Data |  |  |  |  |  |  |  | Read data from CGRAM or DDRAM | 600us |

## Instruction Descriptions

When an instruction is being executed, only the Busy Flag read instruction can be performed. During execution of an instruction, the Busy Flag = " 1 ". When $\mathrm{BF}=$ " 0 " instructions can be sent to the controller.

## Clear Display

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{1}$ |

This instruction is used to clear the display by writing $0 \times 20$ in all DDRAM addresses. This instruction does not change the DDRAM Address.

Return Home

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{0}$ |

This instruction is used to set the DDRAM Address to $0 \times 00$ and shifts the display back to the original state. The cursor (if on) will be at the first line's left-most character. The DDRAM contents on the display do not change.

## Entry Mode Set

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{1}$ | I/D | S |

I/D = Increment/Decrement
When I/D = " 1 ", the DDRAM or CGRAM Address with automatically increment when a character code is written into or read from the DDRAM or CGRAM. The auto-increment will move the cursor one character space to the right.
When $I / D=$ " 0 ", the DDRAM or CGRAM Address with automatically decrement when a character code is written into or read from the DDRAM or CGRAM. The auto-decrement will move the cursor one character space to the left.

S = Shift Entire Display
When $S=$ " 1 ", the entire display is shifted to the right (when I/D = " 0 ") or left (when I/D = " 1 ").
I/D=1, S=1

Initial display Input new character "A" Input new character "B" Input new character "C" Input new character "D"
$I / D=0, S=1$

## Initial display

## Input new character "A"

Input new character "B"
Input new character "C"
Input new character "D"

Display ON/OFF

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{1}$ | D | C | B |

D = Display ON/OFF
When $\mathrm{D}=$ " 1 ", the display is turned ON. When $\mathrm{D}=$ " 0 ", the display is turned OFF. Contents in DDRAM are not changed.
C = Cursor ON/OFF
When $\mathrm{C}=$ " 1 ", the cursor is displayed. The cursor is displayed as 5 dots on the $8^{\text {th }}$ line of a character. When $\mathrm{C}=$ " 0 ", the cursor is OFF.
$B=$ Blinking Cursor
When $\mathrm{B}=$ " 1 ", the entire character specified by the cursor blinks at a speed of 409.6 ms intervals. When $\mathrm{B}=$ " 0 ", the character does not blink, the cursor remains on.

Cursor/Display Shift

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{1}$ | S/C | R/L | $\mathbf{0}$ | $\mathbf{0}$ |

| S/C | R/L | Shift Function |
| :---: | :---: | :--- |
| $\mathbf{0}$ | $\mathbf{0}$ | Shifts the cursor position to the left (AC is decremented by 1). |
| $\mathbf{0}$ | 1 | Shifts the cursor position to the right (AC is incremented by 1). |
| $\mathbf{1}$ | $\mathbf{0}$ | Shifts the entire display to the left. The cursor follows the display shift. |
| $\mathbf{1}$ | $\mathbf{1}$ | Shifts the entire display to the right. The cursor follows the display shift. |

When the display is shifted repeatedly, each line moves only horizontally. The second line display does not shift into the first line.
The Address Counter does not change during a Display Shift.

## Function Set

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{1}$ | DL | $\mathbf{1}$ | $\mathbf{0}$ | FT1 | FT0 |

DL = Interface Data Length
When $\mathrm{DL}=$ " 1 ", the data is sent or received in 8 -bit length via DB7...DBO.
When $\mathrm{DL}=$ " 0 ", the data is sent or received in 4 -bit length via DB7...DB4. When the 4 -bit data length is used, the data must be sent or received in two consecutive writes/reads to combine the data into full 8-bits.

FT1, FT0 = Font Table Selection

| FT1 | FT0 | Font Table |
| :---: | :---: | :--- |
| $\mathbf{0}$ | $\mathbf{0}$ | English / Japanese |
| $\mathbf{0}$ | $\mathbf{1}$ | Western European \#1 |
| $\mathbf{1}$ | $\mathbf{0}$ | English / Russian |
| $\mathbf{1}$ | $\mathbf{1}$ | Western European \#2 |

Note: Changing the font table during operation will immediately change any data currently on the display to the corresponding character on the newly selected font table.

Set CGRAM Address

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{0}$ | $\mathbf{1}$ | ACG5 | ACG4 | ACG3 | ACG2 | ACG1 | ACG0 |

This instruction is used to set the CGRAM address into the Address Counter. Data can then be written to or read from the CGRAM locations. See section: "How to use CGRAM".
ACG5...ACGO is the binary CGRAM address.

## Set DDRAM Address

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{1}$ | ADD6 | ADD5 | ADD4 | ADD3 | ADD2 | ADD1 | ADD0 |

This instruction is used to set the DDRAM address into the Address Counter. Data can then be written to or read from the DDRAM locations.
ADD6...ADDO is the binary DDRAM address.
Line 1 = Address $0 \times 00$ through 0x0F
Line $2=$ Address $0 \times 40$ through $0 \times 4 \mathrm{~F}$

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ | $\mathbf{1 3}$ | $\mathbf{1 4}$ | $\mathbf{1 5}$ | $\mathbf{1 6}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 00 | 01 | 02 | 03 | 04 | 05 | 06 | 07 | 08 | 09 | 0 A | 0 O | 0 C | 0 D | 0 E | 0 F |
| 40 | 41 | 42 | 43 | 44 | 45 | 46 | 47 | 48 | 49 | 4 A | 4 B | 4 C | 4 D | 4 E | 4 F |

Read Busy Flag and Address Counter

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | BF | AC6 | AC5 | AC4 | AC3 | AC2 | AC1 | AC0 |

This instruction is used to read the Busy Flag (BF) to indicate if the display controller is performing an internal operation. The Address Counter is read simultaneously with checking the Busy Flag.
When $B F=$ " 1 ", the controller is busy and the next instruction will be ignored.
When $\mathrm{BF}=$ " 0 ", the controller is not busy and is ready to accept instructions.
AC6...ACO is the binary location of either the CGRAM or DDRAM current address.

## Write Data to CGRAM or DDRAM

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0 | Write Data |  |  |  |  |  |  |  |

This instruction is used to write 8-bits of data to the CGRAM or DDRAM at the current address counter. After the write is complete, the address is automatically incremented or decremented by 1 according to the Entry Mode.

## Read Data from CGRAM or DDRAM

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | Read Data |  |  |  |  |  |  |  |

This instruction is used to read 8-bits of data to the CGRAM or DDRAM at the current address counter. After the read is complete, the address is automatically incremented or decremented by 1 according to the Entry Mode.
The Set CGRAM Address or Set DDRAM Address Instruction must be executed before this instruction can be performed, otherwise the first Read Data will not be valid.

## MPU Interface

When DL is set for 8-bit mode, the display interfaces with the MPU with DB7...DB0 (DB7 is the MSB).
When DL is set for 4-bit mode, the display interfaces with the MPU with only DB7...DB4 (DB7 is the MSB). Each instruction must be sent in two operations, the 4 high-order bits first, followed by the 4 low-order bits. The Busy Flag must be checked after completion of the entire 8-bit instruction.

## 6800-MPU Parallel Interface (default)

| Item | Signal | Symbol | Min. | Typ. | Max. | Unit | Note |

## Serial Interface

In serial interface mode, instructions and data are both sent on the SDI line and clocked in with the SCL line.
/CS must go LOW before transmission, and must go HIGH when switching between writing instructions and writing data. The data on SDI is clocked into the LCD controller on the rising edge of SCL in the following format:

Instruction transmission:

*Note: RS and RW should be used between each instruction.

Data transmission:

*Note: RS and RW only need to be set at the start of continuous data transmission.

| Item | Signal | Symbol | Min. | Typ. | Max. | Unit | Note |

## How to use CGRAM

The Character Generator RAM (CGRAM) is used to generate custom $5 \times 8$ character patterns. There are 8 available addresses: CGRAM Address $0 \times 00$ through $0 \times 08$.

## Notes:

"_" = Not used
The cursor line position can be used, it will be displayed as a logic-OR if the cursor is turned ON.
CGRAM is stored in positions $0 \times 00$ through $0 \times 07$ of the font table. Therefore, to write the first CGRAM character to the display, you would move the cursor to the desired DDRAM location on the display and write character data $0 \times 00$.

## Initialization Sequence

8-bit mode:

Quality Information

| Test Item | Content of Test | Test Condition | Note |
| :---: | :---: | :---: | :---: |
| High Temperature storage | Test the endurance of the display at high storage temperature. | $+80^{\circ} \mathrm{C}, 240 \mathrm{hrs}$ | 2 |
| Low Temperature storage | Test the endurance of the display at low storage temperature. | $-40^{\circ} \mathrm{C}, 240 \mathrm{hrs}$ | 1,2 |
| High Temperature Operation | Test the endurance of the display by applying electric stress (voltage \& current) at high temperature. | $+80^{\circ} \mathrm{C} 240 \mathrm{hrs}$ | 2 |
| Low Temperature Operation | Test the endurance of the display by applying electric stress (voltage \& current) at low temperature. | $-40^{\circ} \mathrm{C}, 240 \mathrm{hrs}$ | 1,2 |
| High Temperature / Humidity Operation | Test the endurance of the display by applying electric stress (voltage \& current) at high temperature with high humidity. | $+60^{\circ} \mathrm{C}, 90 \% \mathrm{RH}, 240 \mathrm{hrs}$ | 1,2 |
| Thermal Shock resistance | Test the endurance of the display by applying electric stress (voltage \& current) during a cycle of low and high temperatures. | $\begin{aligned} & -40^{\circ} \mathrm{C}, 30 \mathrm{~min}->25^{\circ} \mathrm{C}, 5 \mathrm{~min}-> \\ & 80^{\circ} \mathrm{C}, 30 \mathrm{~min}=1 \text { cycle } \\ & 100 \text { cycles } \end{aligned}$ |  |
| Vibration test | Test the endurance of the display by applying vibration to simulate transportation and use. | $10-22 \mathrm{~Hz}, 15 \mathrm{~mm}$ amplitude. 22-500Hz, 1.5G <br> 30 min in each of 3 directions $X, Y, Z$ | 3 |
| Atmospheric Pressure test | Test the endurance of the display by applying atmospheric pressure to simulate transportation by air. | 115mbar, 40hrs | 3 |
| Static electricity test | Test the endurance of the display by applying electric static discharge. | VS=800V, RS=1.5k $\Omega, C S=100 \mathrm{pF}$ One time |  |

Note 1: No condensation to be observed.
Note 2: Conducted after 2 hours of storage at $25^{\circ} \mathrm{C}, 0 \% \mathrm{RH}$.
Note 3: Test performed on product itself, not inside a container.

## Evaluation Criteria:

1: Display is fully functional during operational tests and after all tests, at room temperature.
2: No observable defects.
3: Luminance $>50 \%$ of initial value.
4: Current consumption within $50 \%$ of initial value
