

Wireless System

Usable even in welding environments

Noise resistance

Uses the 2.4 GHz ISM frequency band
Frequency hopping: Every 5 ms

High-speed connection

From power supply ON to start of communication:

Min. 250 ms*1 *1 For wireless Remote

Communication response

Wireless communication signal

Response time: **5 ms**

Communication cables not required

Reduced wiring work, space, and cost
Minimized disconnection risk

Number of I/O points

Max. 1280 inputs/1280 outputs
(Max. 128 inputs/128 outputs per module)

Compatible protocol

EtherNet/IP[™] 

Material handling robot

Wireless Remote

Wireless Base

Spot welding

Wireless Remote

EtherNet/IP

PROFINET

Countries/Regions in which wireless is supported

This product cannot be used in countries where wireless is not supported. Refer to page 23 for details on countries in which the product can be used.

Country/Region	Standards
Japan	 (Japanese radio law)
EU	 (CE marking/RE Directive)
USA	 (FCC)

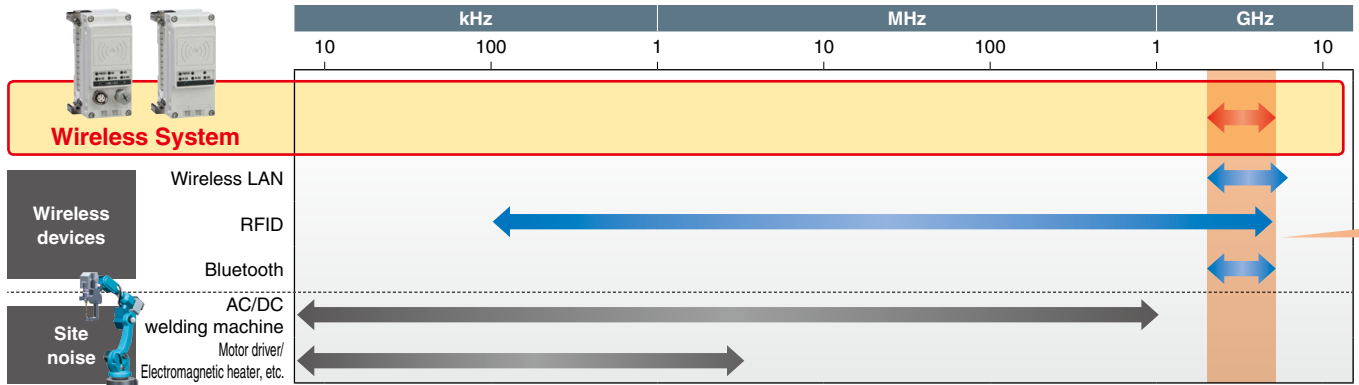

EX600-W Series

CAT.E02-28B [Ⓐ]

Provide safe and reliable communication

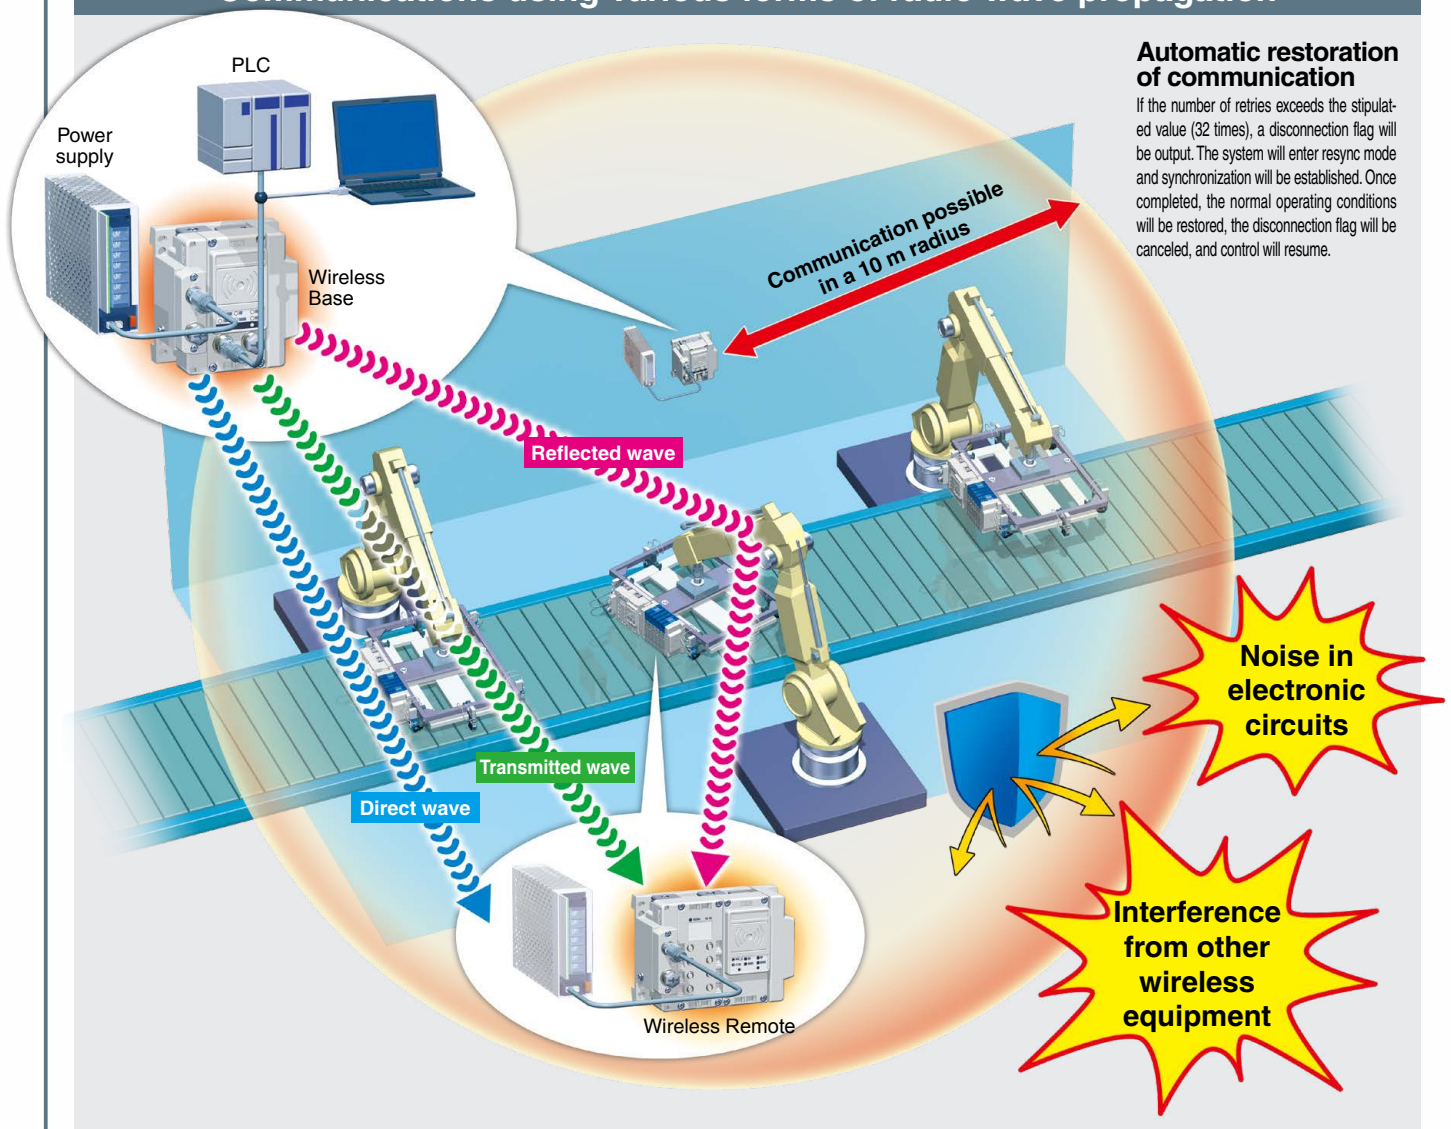

Uses the 2.4 GHz ISM frequency band

* ISM (Industrial, Scientific and Medical) radio bands: Radio bands reserved for the use of radio frequency energy for industrial, scientific and medical purposes.

Provide stable communication

Communications using various forms of radio wave propagation

Automatic restoration of communication

If the number of retries exceeds the stipulated value (32 times), a disconnection flag will be output. The system will enter resync mode and synchronization will be established. Once completed, the normal operating conditions will be restored, the disconnection flag will be canceled, and control will resume.

Frequency hopping: Every 5 ms

A stable wireless environment is established using an original protocol which is not affected by interference. Interference from other wireless equipment is prevented.

Frequency Hopping

The communication technology rapidly changes frequency (hopping), to prevent interference from other wireless equipment. When the frequency of Wi-Fi and other wireless communications compete, or radio wave interference is present, then other frequencies are used for communication. For details, refer to technical data on page 23.

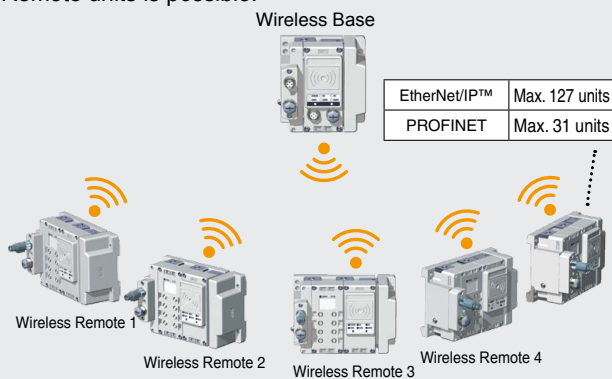

High security using encryption

Unauthorized access from outside is prevented by using data encryption.

Point-to-Multipoint communication

Registration and communication of up to 127 wireless Remote units is possible.

- * 1 to 15 units are recommended for simultaneous operation.
- * It is possible to install multiple wireless masters in the same area.

Wireless communication status can be monitored.

<Monitoring the Remote communication status>

The wireless system connection can be monitored during operation according to the diagnostic data.

The installation location can be ascertained according to the intensity level of the radio wave received by the unit display.

[Diagnostic data]

- * When communication from the Remote cannot be received
- * When communication retry has exceeded the upper limit (32

times)[Unit display]

For wireless Base	W-SS (Radio wave receiving intensity (For communication from wireless Remote to wireless Base))	
EtherNet/IP™ <input type="radio"/> PWR/IV <input type="radio"/> NS <input type="radio"/> MS <input type="radio"/> W-SS <input type="radio"/> W-NS <input type="radio"/> W-MS 1 ● LINK / ACT ● 2	<input checked="" type="radio"/> Green LED is ON.	Received power level of all Remotes is 3.
	<input type="radio"/> Green LED flashes. (1 Hz)	There are connected Remotes with received power level 2.
	<input checked="" type="radio"/> Green LED flashes. (2 Hz)	There are connected Remotes with received power level 1.
	<input type="radio"/> Red LED flashes.	No wireless Remotes connected.
	<input type="radio"/> OFF	Wireless Remote unit is not registered.

For wireless Remote	W-SS (Radio wave receiving intensity (For communication from wireless Base to wireless Remote))	
	<input checked="" type="radio"/> Green LED is ON.	Received power level is 3.
	<input type="radio"/> Green LED flashes. (1 Hz)	Received power level is 2.
	<input checked="" type="radio"/> Green LED flashes. (2 Hz)	Received power level is 1.
	<input type="radio"/> Red LED flashes.	Wireless communication is not connected.
	<input type="radio"/> OFF	Wireless Base unit is not registered.

- * A received radio wave intensity level of 1 means the intensity is weak. Add a wireless Base so that the wave intensity becomes level 3 or 2. Alternatively remove the obstacle between the Base and Remote, or reduce the distance between the Base and Remote.

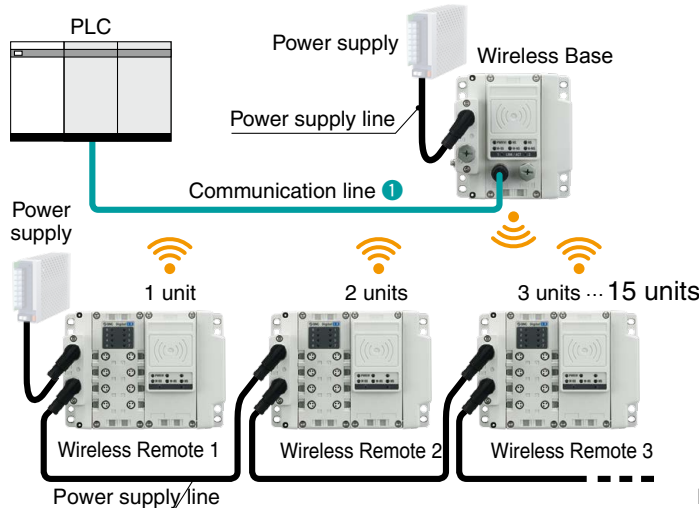

<Communication status can be downloaded by a PC>

By connecting the wireless Base to a PC, it is possible to view log files which show the number of retries or the received radio wave intensity. Log files are accessed by using a web browser to connect to the built-in web server. The wireless environment and installation location can be optimized by checking the number of retries and received radio wave intensity.

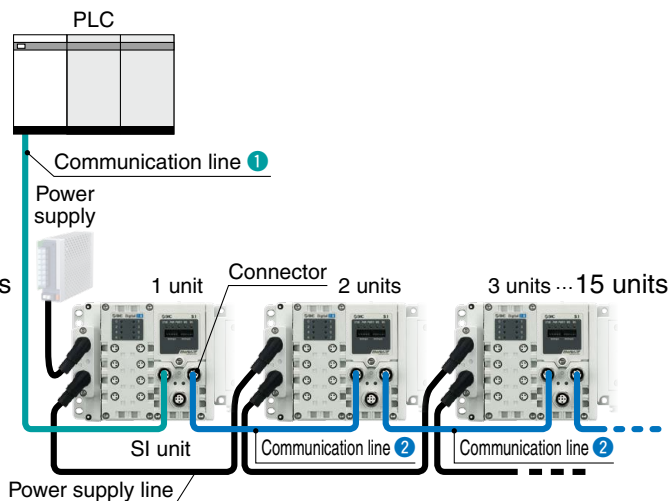

Wiring material cost and installation work-hours can be reduced.

Wireless System

Current (Wired) System

SI unit: Comparison when 15 units are connected

	Number of communication devices	Communication line		Communication connectors required
		①	②	
Wireless system	Wireless Base: 1 unit Wireless Remote: 15 units	1 line (Connector at one end)	—	1 place
Current (Wired)	SI unit: 15 units	1 line (Connector at one end)	14 lines (Connector at both ends)	29 places

Interchangeability maintained

Connection interchangeability between EX600 series SI units is maintained.

Replacement of wireless and wired systems is possible.

* Maximum I/O of wireless Base/Remote unit is limited to 128 points.

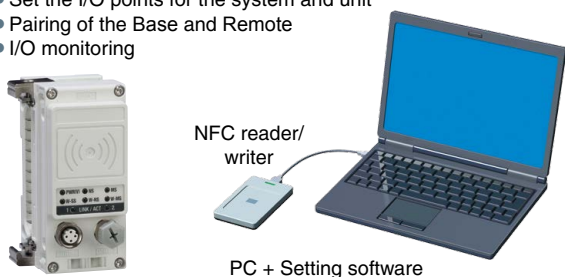

NFC contactless communication

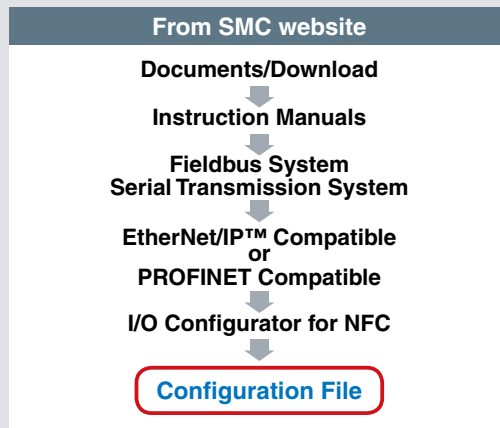

(NFC: Near Field Communication)

Settings are possible using an NFC reader/writer and setting software.
(Some items can be set even when there is no power supplied.)

- Write IP address to the Base
- Set the I/O points for the system and unit
- Pairing of the Base and Remote
- I/O monitoring

Configuration File

Application Examples

Tool change

- Communication cable is not necessary for moving parts.
- Minimized disconnection risk
- Shorter time for establishing communication (startup time)

Rotary table

- Minimized disconnection risk
- Smaller diameter communication cable/tubing

Blocking of radio waves

* The radio waves must not be blocked by nearby conductive objects such as metal enclosures or covers.

System Examples

PLC

Specifications

Wireless Base Unit: EX600-WEN□

Item		Specifications	
EtherNet/IP™ communication	Communication protocol	EtherNet/IP™ (Conformance test version: Composit 12)	
	Transmission medium (cable)	Standard Ethernet cable (CAT5 or higher, 100BASE-TX)	
	Communication speed	10 Mbps/100 Mbps	
	Communication method	Full duplex/Half duplex	
	Configuration file	EDS file*1	
	IP address setting	Manual/BOOTP, DHCP	
	Device information	Vendor ID: 7 (SMC Corp.) Device type: 12 (Communication Adaptor) Product code: 186	
	Topology	Star, Bus, Ring (DLR), Line, Tree	
	QuickConnect™ function	Applicable	
	DLR function	Applicable	
Web server function	Applicable		
Wireless communication	Protocol	SMC original protocol (SMC encryption)	
	Radio wave type (spread)	Frequency Hopping Spread Spectrum (FHSS)	
	Frequency	2.4 GHz (2403 to 2481 MHz)	
	Number of frequency channels	79 ch (Bandwidth: 1.0 MHz)	
	Communication speed	250 kbps	
	Communication distance	10 m (Depending on the operating environment)	
	Radio Law certificate	Japanese radio law (Japan), RE (EU*2), FCC (USA), ANATEL (Brazil), ETA (India), NOM (Mexico), IC (Canada), SRRC (China), NBTC (Thailand)	
Electrical	For control/input (US1)	Power supply voltage	24 VDC ±10%
		Current consumption	150 mA or less
	For output (US2)	Power supply voltage	24 VDC ±10%
		Max. supply current	4 A
Input/Output	Number of inputs	System input size	Max. 1280 points together with the registered Remote units
		Input size	Max. 128 points (increase or decrease by 16 points)
	Number of outputs	System output size	Max. 1280 points together with the registered Remote units
		Output size	Max. 128 points (increase or decrease by 16 points)
	Analog input/output	AD refresh time	10 ms or less (the input connected to the wireless Base unit) 0.1/0.2/0.5/1/2/5/10/30/60 s (the input connected to the wireless Remote unit)*3
		DA refresh time	10 ms or less (the output connected to the wireless Base unit) 0.1/0.2/0.5/1/2/5/10/30/60 s (the output connected to the wireless Remote unit)*3
	Valve output	Output type	EX600-WEN1: Source/PNP (-COM) EX600-WEN2: Sink/NPN (+COM)
		Number of outputs	Max. 32 points (0/8/16/24/32 points)
		Connected load	Solenoid valve with surge voltage suppressor of 24 VDC and 1.5 W or less (manufactured by SMC)
	Number of Remote units connected		Max. 127 units (0/15/31/63/127 units)
Number of connected EX600 I/O units		Max. 9 EX600 series I/O units (I/O = 128. I/O above 128 cannot be recognized.)	
General	Enclosure		Conforms to IP67 (with manifold assembled)
	Ambient temperature (Operating temperature)		-10 to +50°C
	Ambient temperature (Storage temperature)		-20 to +60°C
	Ambient humidity		35 to 85% RH (No condensation)
	Withstand voltage		500 VAC for 1 minute between external terminals and metallic parts
	Insulation resistance		10 MΩ or more (500 VDC between external terminals and metallic parts)
	Vibration resistance		Conforms to EN61131-2 5 ≤ f < 8.4 Hz 3.5 mm 8.4 ≤ f < 150 Hz 9.8 m/s ² (Excludes valve manifold)
	Impact resistance		Conforms to EN61131-2 147 m/s ² , 11 ms (Excludes valve manifold)
	Standards		CE marking (EMC directive/RoHS directive)
	Weight		300 g
NFC communication*4	Communication standard		ISO/IEC 14443B (Type-B)
	Frequency		13.56 MHz
	Communication speed		20 to 100 kHz (I2C)
	Communication distance		Up to 1 cm

*1 The configuration file can be downloaded from the SMC website: <http://www.smcworld.com>

*2 Austria, Belgium, Bulgaria, Croatia, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, U.K., Turkey

*3 Varies depending on the wireless communication status and the surrounding environment

*4 The NFC communication RFID tag of the 13.56 MHz passive type

EX600-W Series

Accessories (Optional Parts)

1 End Plate Bracket

This bracket is used for the end plate of DIN rail mounting.

EX600-ZMA2

Enclosed parts

Round head screw (M4 x 20) 1 pc.
P-tight screw (4 x 14) 2 pcs.

EX600-ZMA3

(Specialized for the SY series)

Enclosed parts

Round head screw with washer (M4 x 20) 1 pc.
P-tight screw (4 x 14) 2 pcs.

3 Reinforcing Brace

This bracket is used on the bottom of the unit at the intermediate position for connecting 6 units or more.

* Be sure to attach this bracket to prevent connection failure between the units caused by deflection.

For direct mounting

EX600-ZMB1

Enclosed parts

Round head screw (M4 x 5) 2 pcs.

For DIN rail mounting

EX600-ZMB2

Enclosed parts

Round head screw (M4 x 6) 2 pcs.

2 Valve Plate

EX600-ZMV1

Enclosed parts

Round head screw (M4 x 6) 2 pcs.
Round head screw (M3 x 8) 4 pcs.

EX600-ZMV2

(Specialized for the SY series)

Enclosed parts

Round head screw (M4 x 6) 2 pcs.
Round head screw (M3 x 8) 4 pcs.

4 Seal Cap (10 pcs.)

Be sure to mount a seal cap on any unused I/O connectors. Otherwise, the specified enclosure cannot be maintained.

For M8
EX9-AWES

For M12
EX9-AWTS

EX600-W Series

⑤ Marker (1 sheet, 88 pcs.)

The signal name of I/O device and each unit address can be entered and mounted on each unit.

EX600-ZT1

⑥ Communication Cable with Connector/Communication Connector

Cable with M12 ↔ RJ-45 connector

EX9-AC 020 EN-PSRJ (Plug/RJ-45 connector)

● Cable length (L)

010	1000 mm
020	2000 mm
030	3000 mm
050	5000 mm
100	10000 mm

Plug connector pin arrangement

Applicable Cable

Cable O.D.	12.0 to 14.0 mm
Wire gauge (Stranded wire cross section)	0.34 to 1.5 mm ² /AWG22 to 16

* The table above shows the specifications for the applicable cable. Adaptation for the connector may vary on account of the conductor construction of the electric wire.

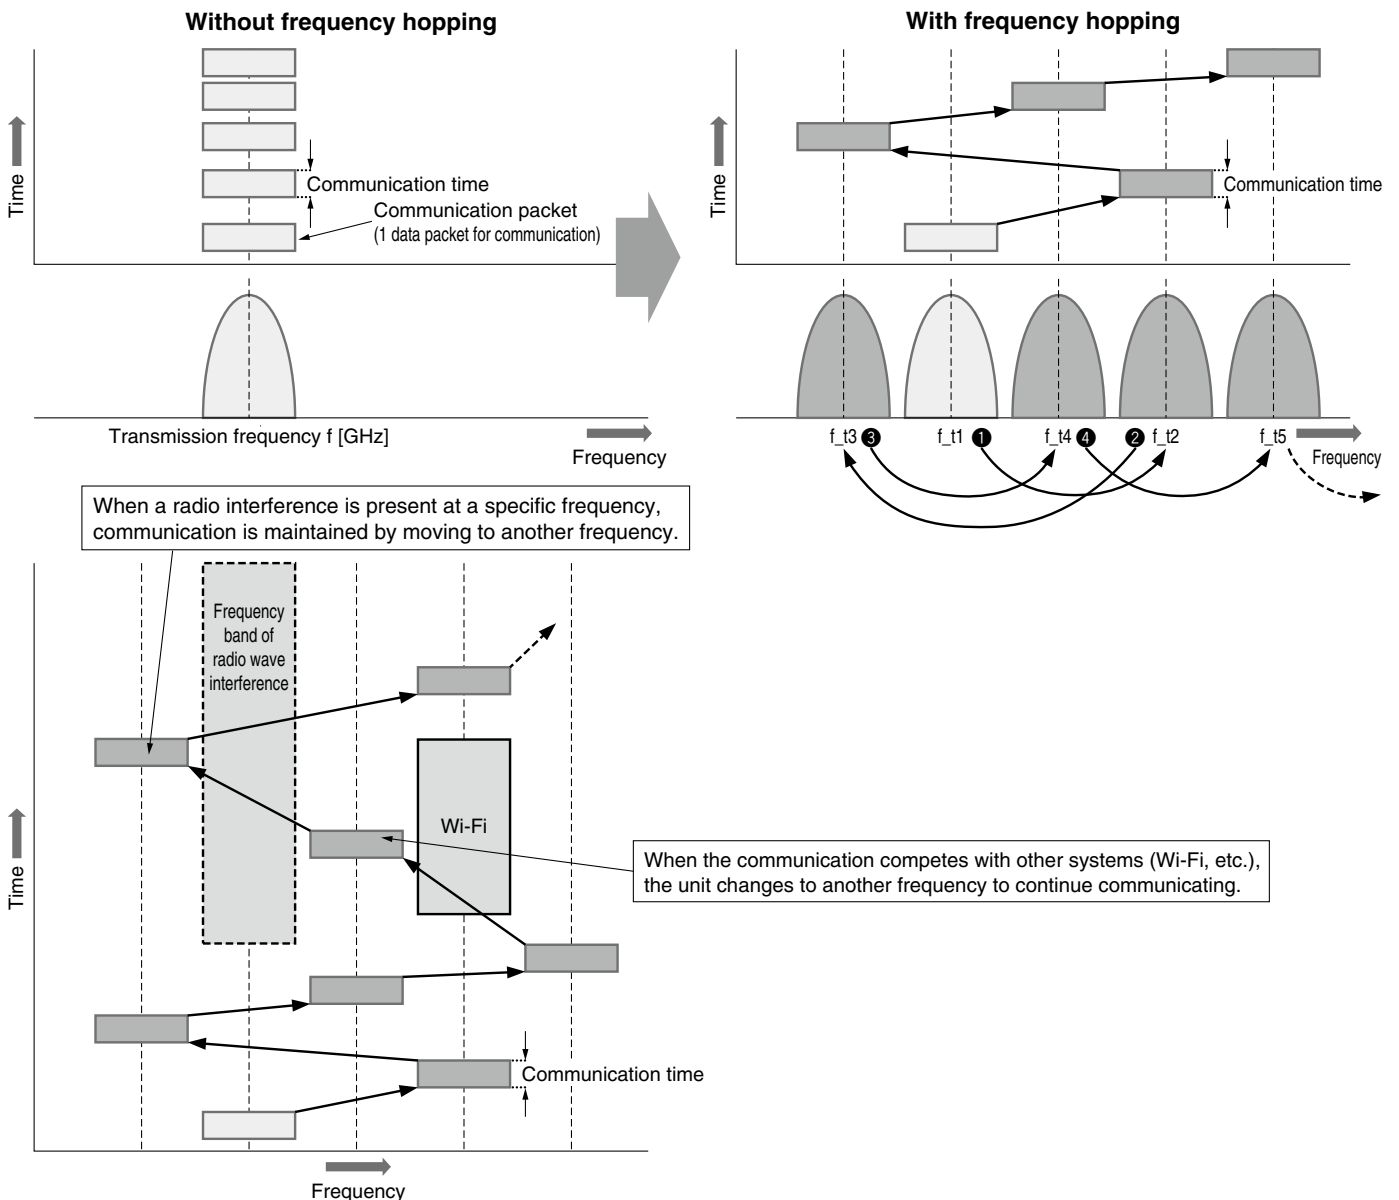

* For further information on cables and connectors, refer to the M8/M12 connector PCA series in the **Web Catalog**.

EX600-W Series

Technical Data

Frequency Hopping (FHSS: Frequency Hopping Spread Spectrum)

A communication technology that uses spread spectrum transmission with frequency hopping to rapidly switch the frequency. Because the frequency rapidly changes all the time, this communication method is resistant to radio wave interference due to reflections or noise from other wireless equipment, while ensuring a high level of data security. Multiple systems can be installed in the same area, and it is a suitable technology for point-to-multipoint communication.

⚠ Warning <Important>

- The product is certified as a wireless equipment in accordance with the Radio Act and the Japanese radio law has been obtained. Customers do not need to apply for a license to use this equipment. Be sure to comply with the following precautions.
 - Do not disassemble or modify the product. Disassembly and modification are prohibited by law.
 - This product is for use in Japan, European countries (Austria, Belgium, Bulgaria, Croatia, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, U.K., Turkey), the U.S., Mexico, Brazil, India, Canada, China and Thailand. For use in other countries, please contact SMC.
- This product communicates by radio waves, and the communication may stop instantaneously due to ambient environments and operating methods. SMC will not be responsible for any secondary failure which may cause personal injury, or damage to other devices or equipment.
- When several units are installed closely to each other, slight interference may occur due to the characteristics of the wireless product.
- The electromagnetic waves emitted from this product may interfere with implantable medical devices such as cardiac pacemakers and cardioverter defibrillators, resulting in the malfunction of the medical device or other adverse effects. Please use extreme caution when operating equipment which may have an adverse effect on your implantable medical device. Be sure to thoroughly read the precautions stated in the catalog, operation manual, etc., of your implantable medical device, or contact the manufacturer directly for further details on what types of equipment need to be avoided.
- The communication performance is affected by the ambient environment, so please perform the communication testing before use. * As of end of December, 2018

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

 **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

 **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

 **Danger :** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots – Safety.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision History

Edition B * PROFINET has been added to protocols.
* Number of pages has been increased from 24 to 28.

WT

Safety Instructions

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
