

SEALED 1/4" MINI JACK MODEL S1K

Many types of professional music equipment nowadays use high power components, and need to be cooled by fans. Fans draw in dust and pollutants which can adversely affect the contacts of conventional jacks, with exposed contacts.

S1K avoids possibility of contamination of contacts by means of a sealing cover over the top and bottom of the jack. The height profile and PCB fitting are the same as our standard S1 jacks.

S1K is available with switched mono /BNB or stereo /BBB configurations and types of front bush. Other contact configurations can be made subject to quantity. Plastic nut is standard.

MODELS

S1KA Standard fully threaded for plastic or metal nut.

S1KB SPN - Partially reduced nose. Nuts not usually used, but are supplied.

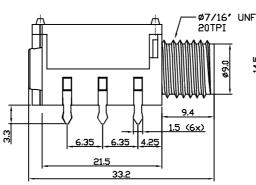

Full thread with discrete bright insert and isolated RFI washer

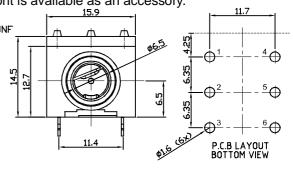

S1KD Full thread with prominent bright insert. RFI washer connected to inserted jack plug.

S1KE Non thread bush. Nuts not used.

Retained hole plug forming a seal for front is available as an accessory.
