⚠ Caution

- Use caution in wiring because it won't meet the IP65 (enclosure) standard if you use the other cord than prescribed heavy-duty cord of size (ø3.5 to ø7.5). Also be sure to tighten the ground nut and holding screw with the prescribed torque range. For how to use DIN terminal (wiring procedures, procedures for changing electrical entries, precautions, applicable cable, circuit diagram), refer to page 4-4-59.
- Type D, DIN terminal with 9.4 mm pitch between terminals is not interchangeable.
- DIN terminal except D type has the "N" indication in the end of voltage symbol. In case of DIN terminal without light, "N" is not indicated. Please refer to the name plate to distinguish.
- Dimensions are completely the same as D type terminal.
- When exchanging the pilot valve assembly only, "V115-□D" is interchangeable with "V115-□Y". Do not replace V111 (G, H, L, M, W) to V115-□D/□Y (DIN terminal), and vice versa.

Specific Product Precautions 1

Be sure to read before handling.

Manual Override Operation

Warning

When the manual override is operated, connected equipment will be actuated. Confirm safety before operating.

■ **Non-locking push type [Standard]**

Press in the direction of the arrow

■ **Push-turn slotted locking type [Type D]**

While pressing, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking type.

Locked position

Caution

When operating the locking type D with a screw driver, turn it gently using a watchmakers' screwdriver.
[Torque: Less than 0.1 N·m]

■ **Push-turn lever locking type [Type E]**

While pressing, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking type.

Locked position

Caution

When locking the manual override on the push-turn locking types (D, E), be sure to push it down before turning. Turning without first pushing it down can cause damage to the manual override and trouble such as air leakage, etc.

Solenoid Valve for 200 V, 220 VAC Specifications

Warning

Solenoid valves with grommet and L/M type plug connector AC specifications have a built-in rectifier circuit in the pilot section to operate the DC coil.

With 200 V, 220 VAC specification pilot valves, this built-in rectifier generates heat when energized. The surface may become hot depending on the energized condition; therefore, do not touch the solenoid valves.

Common Exhaust Type for Main and Pilot Valve

Caution

Pilot air is exhausted through the main valve body rather than directly to atmosphere.

- Suitable for applications where exhausting the pilot valve to atmosphere would be detrimental to the surrounding working environment.
- For use in extremely dirty environments where there is the possibility that dust could enter the pilot exhaust and damage the valve.

Ensure that the piping of exhaust air is not too restrictive.

Bracket

Caution

For bracket attached styles of SYJ300, do not use it without bracket.

Be sure to read before handling.

How to Use Plug Connector

⚠ Caution

1. Attaching and detaching connectors

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping of lead wires and sockets

Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area.

Use an exclusive crimping tool for crimping.
(Please contact SMC for special crimping tools.)

3. Attaching and detaching sockets with lead wires

• Attaching

Insert the sockets into the square holes of the connector (+, - indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then confirm that they are locked by pulling lightly on the lead wires.

• Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

Surge Voltage Suppressor

Caution

<For DC>
Grommet, L/M Plug Connector Type

Standard type (with polarity)

With surge voltage suppressor (□S)

With light/surge voltage suppressor (□Z)

Non-polar type

With surge voltage suppressor (□R)

With light/surge voltage suppressor (□U)

- Connect the standard type in accordance with the +, - polarity indication. (The non-polar type can be used with the connections made either way.)
- Since voltage specifications other than standard 24 V and 12 VDC do not have diodes for polarity protection, be careful not to make errors in the polarity.
- When wiring is done at the factory, positive (+) is red and negative (-) is black.

With power saving circuit

Power consumption is decreased by 1/4 by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 62 ms at 24 VDC.)

Working Principle

With the above circuit, the current consumption when holding is reduced to save energy. Please refer to the electric wave data to the right.

(In the case of SYJ³□□□□, the electric wave form of energy saving type)

Surge Voltage Suppressor

<For AC>

(There is no "S" type because the generation of surge voltage is prevented by a rectifier.)

Caution

Grommet, L/M Plug Connector Type

With indicator light (□Z)

Note) Surge voltage suppressor other than diode has residual voltage corresponding to the protective element and rated voltage; therefore protect the controller side from the surge. The residual voltage of the diode is approximately 1 V.

DIN Terminal Type

With indicator light (DZ)

Note) Surge voltage suppressor of varistor has residual voltage corresponding to the protective element and rated voltage; therefore, protect the controller side from the surge. The residual voltage of the diode is approximately 1 V.

How to Use DIN Terminal

Caution

Connection

1. Loosen the holding screw and pull the connector out of the solenoid valve terminal block.
2. After removing the holding screw, insert a flat head screwdriver, etc. into the notch on the bottom of the terminal block and pry it open, separating the terminal block and the housing.
3. Loosen the terminal screws (slotted screws) on the terminal block, insert the cores of the lead wires into the terminals according to the connection method, and fasten them securely with the terminal screws.
4. Secure the cord by fastening the ground nut.

Caution

When making connections, take note that using other than the supported size (ø3.5 to ø7) heavy-duty cord will not satisfy IP65 (enclosure) standards. Also, be sure to tighten the ground nut and holding screw within their specified torque ranges.

Changing the entry direction

After separating the terminal block and housing, the cord entry can be changed by attaching the housing in the desired direction (4 directions at 90° intervals).

* When equipped with a light, be careful not to damage the light with the cord's lead wires.

How to Use DIN Terminal

Caution

Precautions

Plug in and pull out the connector vertically without tilting to one side.

M8 Connector

⚠ Caution

1. M8 connector types have an IP65 (enclosure) rating, offering protection from dust and water. However please note: these products are not intended for use in water. Select a SMC connector cable (V100-49-1-□) or a FA sensor type connector, with M8 threaded 3 pin specifications conforming to Nippon Electric Control Equipment Association Standard, NECA4202 (IEC60947-5-2). Make sure the connector O.D. is 10.5 mm or less when used with the Series SYJ300 manifold. If more than 10.5 mm, it cannot be mounted due to the size.
2. Do not use a tool to mount the connector, as this may cause damage. Only tighten by hand. (0.4 to 0.6 N·m)

⚠ Caution

Failure to meet IP65 performance may result if using alternative connectors than those shown above, or when insufficiently tightened.

• Connector cable mounting

Note) Connector cable should be mounted in the correct direction. Make sure that the arrow symbol on the connector is facing the triangle symbol on the valve when using SMC connector cable (V100-49-1-□). Be careful not to squeeze it in the wrong direction, as problems such as pin damage may occur.
