■ Series Variations

Series	CKZT			
Bore size (mm)	ø40	ø50 Equivalent	ø63 Equivalent	ø80 Equivalent
Arm opening angle	30°, 45°, 60°, 75° 90°, 105°, 120°, 135°			
Switch	TURCK/P&F			
Port thread type	G/NPT			

Series CKZT

Model Selection

1 Common precautions for each size

- 1) Use air filtered through a 5- μ m-element filter.
- 2) Before piping is connected to the slim-line power clamp cylinder it should be thoroughly flushed with air.
- 3) Only use the clamp arm in our catalog. Do not weld an arm to the cylinder.
- 4) Make sure to use a speed controller and adjust it to more than 1sec. when changing from clamping to unclamping (or vice versa).

2 Slim-line power clamp cylinder mounting

When clamping by using clamping force only

Example)

Mounting process

Procedure

- A) Place the workpiece, supply air at clamp side without installing clamping block, operate the clamp arm to the end of clamp.
- B) Under the above conditions, adjust shim so that the space between the workpiece and the clamping block is about 0 mm. Theoretically there is no clamping force for holding a workpiece under this condition.
- C) In order to generate clamping force from the state described in step B, insert additional shim. The thickness of the shim differs depending on the arm length and pressure, so please refer to the graph on pages 186 and 187 as a guide. About 10% error may occur due to the difference in tolerance of the power clamp cylinder body.

Model Selection

2 Slim-line power clamp cylinder mounting

Relation between shim thickness and clamping force

Note) When a shim that exceeds the clamping force peak plotted on the graph is inserted, the self-locking mechanism doesn't work. Insert a shim with appropriate thickness.

* Arm length "L" indicates the distance between the clamp arm shaft and the clamping position. For distance "A" between knock positioning pinhole and clamp arm shaft, refer to the Table 1.

Model Selection

2 Slim-line power clamp cylinder mounting

When using a hard stop

Mounting process

Procedure

- A) Supply air at clamp side without installation of upper hard stop, and operate the clamp arm to the end of clamp.
- B) Under the above conditions, adjust shim ① so that the space between the upper hard stop and the lower hard stop is about 0 mm. Theoretically there is no clamping force to the lower hard stop under this condition.
- C) In order to generate clamping force from the state described in step B, insert additional shim. The thickness of the shim differs depending on the arm length and pressure, so please refer to the graph on pages 186 and 187 as a guide. About 10% error may occur due to the difference in tolerance of the power clamp cylinder body.
- D) Under the state described in step C, adjust shim ② so there is contact between the clamping block and the workpiece.

When using the side guide

Precautions

When using the side guide to the clamp arm to prevent lateral motion, make sure not to apply a lateral load or galling to the clamp arm.

3 Clamp arm

Use the clamp arm in the catalog.

The length of the clamp arm "L" should be the length given below or less.

Model	Arm length L
CKZT40	150 mm
CKZT50	150 mm
CKZT63	300 mm
CKZT80	400 mm

Relation between clamp arm length and clamping force

Allowable load for clamp arm end

Refer to the graph on pages 190 and 191 for parts weight of the arm.

Use within the allowable arm end load range according to the distance "L" from the fulcrum to the mounting tool's center position and the arm opening angle "θ".

* For mounting bolt, a hexagon socket head cap screw and a spring washer No. 2 are recommended.

** For mounting bolt, a hexagon socket head cap screw and a spring washer No. 2 are recommended.
** Use the attached spring washer.

2. When mounted vertically, use caution since the arm may interfere with the equipment, jig or mounting bolt.

Please follow the "Recommended arm installation" instructions when setting the arm in a vertical clamping position. When installing the arm backwards, use caution as the arm may interfere with the equipment, jig or mounting bolt.

Recommended arm installation

Series CKZT Made to Order 1

Contact SMC for detailed dimensions, specifications and delivery.

1 Power clamp cylinder with metal cover

- Applicable model
CKZT40, 50, 63, 80
- Applicable to Arc-melting-resistant line
- In addition to the existing rubber cover type, Opening/closing metal cover type is available for releasing part of the toggle construction.

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	30°, 45°, 60°, 75°, 90°, 105°, 120°, 135°		
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp		

Manual toggle release

The toggle link mechanism can be released easily by opening the metal cover and hitting the portion of the protrusion by using of plastic hammer (hammer made of soft material), etc.

2 Power clamp cylinder with angle adjustment

- Applicable model
CKZT40, 50, 63, 80
- Unclamped opening angle can be adjusted by one process. (no need to adjust the proximity switch)
- Adjustable range: 30° to 135°
- With angle scale

Cylinder Specifications

Bore size (mm)	40	50	63	80
Angle	30° to 135°			
Cushion	Unclamping side: Rubber bumper			
Maximum operating pressure	0.8 MPa (116 psi)			
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)			
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp			

Series CKZT Made to Order 2

Contact SMC for detailed dimensions, specifications and delivery.

3 Power clamp cylinder with manually operated handle

* The photo shows handle position L.

- Applicable model
CKZT50, 63, 80
- Applicable to equipment requiring manual clamps.
- Self-weight drop prevention when unclamping

Series	Angle	Special order part no.	
		Handle position R	Handle position L
CKZT50	30°, 45°, 60°, 75°	CKZT50-□-DCN017AN	CKZT50-□-DCN018AN
CKZT63	90°, 105°, 120°	CKZT63-□-DCN019AN	CKZT63-□-DCN020AN
CKZT80	30°, 45°, 60°, 75°, 90°, 105°	CKZT80-□-DCN021AN	CKZT80-□-DCN022AN

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	30°, 45°, 60°, 75°, 90°, 105°, 120°		30°, 45°, 60°, 75°, 90°, 105°
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp		

4 Power clamp cylinder with pneumatic sensor

Pneumatic sensor

- Applicable model
CKZT50, 63, 80
- Applicable to all air circuit equipment.
- Built-in mechanical valve. Position detection is possible at clamping or unclamping according to the signal received from the mechanical valve.

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	30°, 45°, 60°, 75°, 90°, 105°, 120°, 135°		
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp		

For Asia: CK□1, CLK2, C(L)K□□, MK2T/MK2/MK
 For North America: CKZ2N
 For Europe: CKZT
 For France: CLKZ1R
 Special: CK□/M(D)JKA

Series CKZT

Made to Order 3

Contact SMC for detailed dimensions, specifications and delivery.

5 Unclamped opening angle 15° kit (for change of angle)

- Applicable model
CKZT40, 50, 63, 80
- In addition to the standard unclamped opening angle, 15° specification is available.
- Unclamped opening angle can be changed to 15° without disassembling the toggle construction.

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	15°		
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp		

Series CKZT Specific Product Precautions

Be sure to read this before handling. Refer to pages 222 and 223 for Safety Instructions and “Precautions for Handling Pneumatic Devices” (M-03-E3A) for Actuator Precautions.

1. Manual toggle release

The toggle link mechanism can be released easily by hitting the portion of round shaped projection on the cover by using of plastic hammer (hammer made of soft material), etc.

Please be sure to perform manual toggle release after safety has been confirmed because the clamp arm can suddenly move up during manual release.

2. Do not disassemble the power clamp

No special maintenance is necessary because the power clamp has a fully enclosed design to protect the clamp against welding spatter, and also the power clamp has a contamination resistant construction. So, please do not disassemble the power clamp except changing replaceable parts as there is a possibility of deterioration of the clamp performance.

3. Tightening torque of spare parts

Please make sure to tighten spare parts recommended in accordance with the following torque shown in the table.

Description	Bore size (mm)	Tightening torque	
		N·m	lbf·in
Switch cassette kit	40	3.0 to 4.0	27 to 35
	50	5.0 to 7.0	44 to 62
	63	5.0 to 7.0	44 to 62
	80	5.0 to 7.0	44 to 62
Switch bracket kit	40	1.5 to 2.0	13 to 18
	50	3.0 to 4.0	27 to 35
	63	3.0 to 4.0	27 to 35
	80	3.0 to 4.0	27 to 35
Stopper bolt kit	40	12.5 to 17.0	110 to 150
	50	130 to 150	1150 to 1327
	63	160 to 200	1416 to 1770
	80	480 to 520	4248 to 4600
Top cover kit	40	1.5 to 2.0	13 to 18
	50	2.5 to 3.0	22 to 27
	63	2.5 to 3.0	22 to 27
	80	3.0 to 5.0	27 to 44

Note: (1) Please make sure that the switch cassette is tightly secured to the body when it has been replaced with a new one.

(2) Please make sure that the dog is mounted so that the stamped side is secured as shown below if replacing.

4. Clamp Arm Tightening Torque

Bore size (mm)	Tightening torque	
	N·m	lbf·in
40	6 to 9	53 to 80
50	12 to 15	106 to 133
63	15 to 20	133 to 177
80	18 to 24	159 to 212
