

5 Port Solenoid Valve

VF1000/3000/5000 Series

Reduced power consumption:

0.55 W [With power saving circuit]
 [Starting 1.55 w Holding 0.55 w]

1.55 W [Standard]
 (Current: 2.0 W) * With DC light

Power consumption is reduced by power saving circuit.

Power consumption is decreased by approx. 1/3 by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 40 ms at 24 VDC.) Refer to electrical power waveform as shown below.

Electrical power waveform with power saving circuit

VF3000 Series

Low wattage specification added
 * VF1000/3000

Power consumption **0.35 w** (Without light)
0.4 w (With light)

■ Built-in full-wave rectifier (AC)

● Noise reduction

Noise is considerably reduced by changing it to DC mode with a full-wave rectifier.

● Reduced apparent power

Current: 5.6 VA → 1.55 VA

■ Built-in strainer in the pilot valve

Unexpected troubles due to foreign matter can be prevented. (Note) Be sure to mount an air filter on the inlet side.

Rubber material: HNBR
 Ozone-resistant specification
 * The pilot valve poppet is made of FKM.

How to Order Pilot Valve Assembly (With a gasket and two mounting screws)

⚠ Caution

When only the pilot valve assembly is replaced, it is not possible to change from V211 (Grommet or L/M-type) to V212 (DIN or Conduit type), or vice versa.

Valve model: VF□□□□□□ - 5 G Z □ 1 - □□□□

* Select from the below in accordance with the valve used.

U	With light/surge voltage suppressor (Non-polar)	○	—

Note) S type is not available with AC mode, since a rectifier prevents surge voltage generation. When T is selected, only Z type of light/surge voltage suppressor is available.

⚠ Caution

When using the surge voltage suppressor type, residual voltage will remain. Refer to page 348 for details.

1 Body Ported Pilot Exhaust Port with Piping Thread (M3) Specification

In this specification, piping to the pilot exhaust port (PE port) is available when the valve is used in an environment where the exhaust from the pilot valve is not allowable, or intrusion of ambient dust should be prevented. Combination with low wattage specification is not possible.

2 TRIAC Output Specification

For AC type valve, use this specification when the pilot valve is not recovered even though valve power supply is turned OFF at the equipment using output unit with large leakage valve over 8% of the rated voltage (TRIAC output such as PLC or SSR, etc.). Combination with low wattage specification is not possible.

* Based on IEC 60529.

Note) Impact resistance: No malfunction occurred when it is tested in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)

Manual Override

⚠ Warning

Regardless of an electric signal for the solenoid valve, the manual override is used for switching the main valve. Connected actuator is started by manual operation. Use the manual override after confirming that there is no danger.

■ Non-locking push type

Push down on the manual override with a small screwdriver until it stops. Release the screwdriver and the manual override will return.

■ Push-turn locking slotted type

Locked position

Push down on the manual override with a small flat head screwdriver until it stops. Turn it clockwise by 90° to lock it. Turn it counterclockwise to release it.

■ Push-turn locking lever type

Locked position

After pushing down, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking push type.

⚠ Caution

When locking the manual override on the push-turn locking type (D or E type), be sure to push it down before turning. Turning without first pushing it down can cause damage to the manual override and other trouble such as air leakage, etc. Do not apply excessive torque when turning the locking type manual override. (0.1 N·m)

How to Use L/M-Type Plug Connector

⚠ Caution

1. Connector attachment/detachment

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping lead wire and socket connection

Not necessary if ordering the lead wire pre-connected model. Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area. (Please contact SMC for details on the crimping tool.)

3. Socket with lead wire attachment/detachment

• Attachment

Insert the sockets into the square holes of the connector (with +, - indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then, confirm that they are locked by pulling lightly on the lead wires.

• Detachment

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

Plug Connector Lead Wire Length

⚠ Caution

Plug connector lead wires have a standard length of 300 mm, however, the following lengths are also available.

How to Order Connector Assembly

DC	: V200-30-4A-	
100 VAC	: V200-30-1A-	
200 VAC	: V200-30-2A-	
Other AC voltages	: V200-30-3A-

15	1500 mm
20	2000 mm
25	2500 mm
30	3000 mm
50	5000 mm

How to Order

Specify the connector assembly part number together with the part number for the plug connector type solenoid valve without connector.

(Example) Lead wire length: 2000 mm

How to Use DIN Terminal Connector

The DIN terminal with an IP65 (enclosure) is protected against dust and water, however, it must not be used in water.

⚠ Caution

Connection

- 1) Loosen the set screw and pull the connector out of the solenoid valve terminal block.
- 2) After removing the set screw, insert a flat head screwdriver, etc. into the notch on the bottom of the terminal block and pry it open, separating the terminal block and the housing.
- 3) Loosen the terminal screws on the terminal block, insert the core of the lead wire into the terminal, and attach securely with the terminal screws.

In addition, when using the DC mode type with a surge voltage suppressor (polar: S and Z types), connect wires corresponding to the polarity (+ or -) that is printed on the terminal block.

- 4) Secure the cord by fastening the ground nut.

In the case of connecting wires, select cable cords carefully because if those out of the specified range ($\phi 4.5$ to $\phi 7$) are used, it will not be able to satisfy IP65 (enclosure).

Tighten the ground nut and set screw within the specified range of torque.

* Refer to page 347 for the DIN connector part no.

Changing the entry direction

After separating the terminal block and housing, the cord entry direction can be changed by attaching the housing in the opposite direction.

* Make sure not to damage elements, etc., with the lead wires of the cord.

Precautions

Plug in and pull out the connector vertically without tilting to one side.

How to Use Conduit Terminal

Caution

Connection

- Loosen the set screw and remove the terminal block cover from the terminal block.
- Loosen the terminal screws on the terminal block, insert the core of the lead wire or crimped terminal into the terminal, and attach securely with the terminal screws.

In addition, when using the DC mode type with a surge voltage suppressor (polar: S and Z types), connect wires to terminal 1 and 2 corresponding to the polarity (+ or -) as shown on the right figure.

In the case of connecting wires, select cable cords carefully because if those out of the specified range (ø4.5 to ø7) are used, it will not be able to satisfy IP65 (enclosure).

Tighten the ground nut and set screw within the specified range of torque.

Light/Surge Voltage Suppressor

⚠ Caution

<DC>

■ Polar type

With surge voltage suppressor (□S) Polarity protection diode

● Grommet or L/M-type plug connector

With light/surge voltage suppressor (□Z)

● DIN or Conduit terminal

With light/surge voltage suppressor (□Z)

■ Non-polar type

With surge voltage suppressor (□R)

● Grommet or L/M-type plug connector

With light/surge voltage suppressor (□U)

● DIN or Conduit terminal

With light/surge voltage suppressor (□U)

- Please connect correctly the lead wires to + (positive) and - (negative) indications on the connector. (For non-polar type, the lead wires can be connected to either one.)
- When the valve with polarity protection diode is used, the voltage will drop by approx. 1 V. Therefore, pay attention to the allowable voltage fluctuation (For details, refer to the solenoid specifications of each type of valve).
- Solenoids, whose lead wires have been pre-wired: + (positive) side red and - (negative) side black.

■ With power saving circuit

Power consumption is decreased by approx. 1/3 by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 40 ms at 24 VDC.)

Refer to the electrical power waveform as shown below.

<Electrical power waveform of energy saving type>

- Since the voltage will drop by approx. 0.5 V due to the transistor, pay attention to the allowable voltage fluctuation. (For details, refer to the solenoid specifications of each type of valve.)

<AC>

S type is not available, since a rectifier prevents surge voltage generation.

● Grommet or L/M-type plug connector

With light/surge voltage suppressor (□Z)

● DIN or Conduit terminal

With light/surge voltage suppressor (□Z)

Residual voltage of the surge voltage suppressor

Note) If a varistor or diode surge voltage suppressor is used, there is some residual voltage to the protection element and rated voltage. Therefore, refer to the table below and pay attention to the surge voltage protection on the controller side. Also, since the response time does change, refer to the specifications on pages 299 and 313.

Residual Voltage

Surge voltage suppressor	DC		AC

One-touch Fittings Precautions

⚠ Caution

When fittings are used, they may interfere with one another depending on their types and sizes. Therefore, the dimensions of the fittings to be used should first be confirmed in their respective catalogs.

Fittings whose compliance with the VF series is already confirmed are stated below. If the fitting within the applicable range is selected, there will not be any interference.

Applicable Fittings: KQ2H, KQ2S Series

Manual Override

⚠ Warning

1. Non-locking push type [Standard]

Press in the direction of the arrow.

2. Push-turn locking slotted type [D type]

After pushing down, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking push type.

Locked position

⚠ Caution

When operating the D type, use a watchmakers' screwdriver and turn lightly.

[Torque: Less than 0.1 N·m]

3. Push-turn locking lever type [E type]

After pushing down, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking push type.

Locked position

⚠ Caution

When locking the manual override with the push-turn locking type (D or E type), be sure to push it down before turning.

Turning without first pushing it down can cause damage to the manual override and other trouble such as air leakage, etc.

Solenoid Valve for 200/220 VAC Specification

⚠ Warning

AC specification solenoid valves with grommet or L/M-type plug connector have a built-in rectifier circuit in the pilot section to operate the DC coil. With 200/220VAC specification pilot valves, this built-in rectifier generates heat when energized. The surface may become hot depending on the energized condition; therefore, do not touch the solenoid valves.

How to Use L/M-Type Plug Connector

⚠ Caution

1. Connector attachment/detachment

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping lead wire and socket connection

Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area.

(Please contact SMC for the dedicated crimping tools.)

3. Socket with lead wire attachment/detachment

• Attachment

Insert the sockets into the square holes of the connector (with +, - indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then, confirm that they are locked by pulling lightly on the lead wires.

• Detachment

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

Plug Connector Lead Wire Length

⚠ Caution

Plug connector lead wires have a standard length of 300 mm, however, the following lengths are also available.

How to Order Connector Assembly

DC: **SY100-30-4A** - []

100 VAC: **SY100-30-1A** - []

200 VAC: **SY100-30-2A** - []

Other AC voltages: **SY100-30-3A** - []

Without lead wire: **SY100-30-A**

(With a connector and 2 sockets)

How to Order

Specify the connector assembly part number together with the part number for the plug connector type solenoid valve without connector.

(Example) Lead wire length: 2000 mm

DC	AC
VF3130Y-5LO1-02	VF3130Y-1LO1-02
SY100-30-4A-20	SY100-30-1A-20

Lead wire length

Nil	300 mm
6	600 mm
10	1000 mm
15	1500 mm
20	2000 mm
25	2500 mm
30	3000 mm
50	5000 mm

Light/Surge Voltage Suppressor

⚠ Caution

1. L/M-type plug connector

<DC>

<AC>

2. DIN terminal

<DC>

With surge voltage suppressor (DS, DOS, YS, YOS)

With light/surge voltage suppressor (DZ, YZ)

<AC>

With indicator light (DZ, YZ)

Note) If a varistor surge voltage suppressor is used, there is some residual voltage to the protection element and rated voltage. Therefore, pay attention to the surge voltage protection on the controller side.

How to Use DIN Terminal

1. ISO#: Conforming to EN-175301-803C (former DIN 43650C) (Distance between pins: 8 mm)

The DIN terminal type with an IP65 (enclosure) is protected against dust and water, however, it must not be used in water.

2. Connection

- Loosen the set screw and pull the connector out of the solenoid valve terminal block.
- After removing the set screw, insert a flat head screwdriver, etc. into the notch on the bottom of the terminal block and pry it open, separating the terminal block and the housing.
- Loosen the terminal screws (slotted head screw) on the terminal block, insert the core of the lead wire into the terminal according to wiring connection, and attach securely with the terminal screws.
- Tighten the ground nut to secure the wire.

3. Changing the entry direction

After separating the terminal block and housing, the cord entry direction can be changed by attaching the housing in a different direction (four directions at 90° intervals).

* Make sure not to damage a light, etc., with the lead wires of the cord.

4. Precautions

Plug in and pull out the connector vertically without tilting to one side.

5. Applicable cable

Cable O.D: $\phi 3.5$ to $\phi 7$

(Reference) 0.5 mm², 2-core or 3-core, equivalent to JIS C 3306
