### General Description

The Oscar 20A antenna is a high gain, quad band 2G/3G/4G and 5G LTE antenna generally used in fixed locations where the base station direction is known.

The advantage of using a yagi type antenna is to improve performance over omnidirectional antennas whilst keeping the size in a small format.

See the Snyder cellular signal tester for a tool to locate the best base station in your area.

### Additional Considerations

- High performance for fringe coverage areas
- Suitable for both indoor and outdoor use
- Meets all EU compliance criteria for electronic goods
