USB C Multiport Adapter, Dual HDMI Video, 4K 60Hz, 2-Port 10Gbps USB 3.1 Hub, 100W USB PD Passthrough, GbE, SD, 12"/30cm Cable, Travel Dock, Laptop Docking Station

Product ID: 102B-USBC-MULTIPORT

This USB-C Mini Dock / Multiport Adapter supports up to dual 4K 60Hz HDMI 2.0 converting your Dell XPS, MacBook or other USB-C laptop or tablet into a workstation, anywhere you go. The USB Type-C Multiport Adapter features 2x HDMI video outputs, a 2-Port USB 3.2 Gen 2 (10 Gbps) Hub (1x USB-A with B.C 1.2 charging, and 1x USB-C), an SD card reader, and Gigabit Ethernet. The adapter connects to your host computer's USB-C, USB4, or Thunderbolt 3/4 port. Charge your host laptop and any attached USB peripherals by connecting the host laptop's power supply to the dedicated USB Power Delivery (PD) 3.0 port. The Multiport Adapter features an extra-long attached 12-inch (30 cm) host cable - for an extended reach, to offer more set up flexibility.

The Mini Docking Station is DisplayLink Certified and supports high-performance dual-monitor 4K 60Hz video resolution with an integrated DisplayLink DL-6950 Controller. Multi-monitor performance makes this dock ideal for high-resolution applications such as video editing and graphic design. The Multiport Adapter supports ultrawide 21:9 aspect ratios, and lower resolutions like 1920x1200/1080p.

The USB-C to USB 3.2 Gen 2 hub features two downstream 10 Gbps USB ports, including 1x USB-C data port for connecting your USB-C peripherals, and 1x USB-A data + 7.5W BC 1.2 charging port for connecting and charging USB-A peripherals.

A versatile dock solution for use at your office, home office, hotel, or in the boardroom, and is portable enough to be carried in your bag or backpack for mobile use. This lightweight USB-C Adapter can operate with bus-power alone, or use the dedicated USB-C Power Delivery port to connect a USB-C power adapter (not included with Multiport Adapter) for laptop charging.

Access your multimedia content with ease. The Multiport Adapter provides direct access to your SD, SDHC and SDXC memory cards.

With support for USB Power Delivery 3.0 pass through (up to 100W), the USB Type-C Multiport Adapter allows you to power and charge your laptop, when connected to a USB-C power source. PD 3.0 features Fast Role Swap (FRS) to prevent USB data disruption when you switch power sources (USB-C power adapter to bus power). This allows you to charge the connected host device, as well as any devices connected to the USB-A BC 1.2 charging port.

The Gigabit Ethernet port ensures reliable wired network access, with support for PXE Boot and WoL.

Developed to improve performance and security, StarTech.com Connectivity Tools is the only software suite on the market that works with a wide range of IT connectivity accessories. The software suite includes:

Advanced Windows Layout Utility: To setup and save custom windows layouts.

MAC Address Pass-Through Utility: To improve network security.

USB Event Monitoring Utility: To track and log connected USB devices.

Wi-Fi Auto Switch Utility: Enabling users to quickly access faster network speeds via wired LAN.

Special Notes / Requirements

System and Cable Requirements	A host laptop with an available USB-C port (to ensure full adapter functionality, the host USB-C port must support USB Power Delivery).
	Optional: USB-C power adapter (for example, your laptop's USB-C based power adapter).
Note	Not all USB-C ports support the full functionality of the USB Type-C standard. Ensure that your host USB-C port supports USB Power Delivery.
	The adapter can connect to a host laptop's USB-C port that doesn't support USB Power Delivery. However, in this

configuration if a power adapter is connected to the multifunction adapter, it will not pass power through to your host laptop.

A 4K-capable display is required to achieve 3840 x 2160p resolution (4K is also known as 4K x 2K).

USB 3.2 Gen 2 (10Gbps) is also known as USB 3.1 Gen 2 (10Gbps).

Your laptop might have specific charging requirements. For example, if your laptop requires exactly 60W of power and an adapter consumes some of the 60W, your laptop might not recognize that it is getting enough power. For more information about Power Delivery, refer to the manufacturer of your hardware.
