# 3-Color Display Digital Flow Switch for Large Flow Applicable fluid Air, N2 ( E RoHS IP65

# **Flow ratio**<sup>\*2</sup> **100:1** A wide range of flow measurement is possible with 1 product.

\*2 The flow ratio is 20 : 1 for the existing model (PF2A7 $\Box$ H/Large flow type).

# IO-Link Compatible

The measured value and the device status can be figured out easily via the process data.

# Improved resistance to moisture and foreign matter

The bypass construction reduces sensor accuracy deterioration and damage. **p.1** 

# Modular type

Can be connected to the air combination **p.5** 

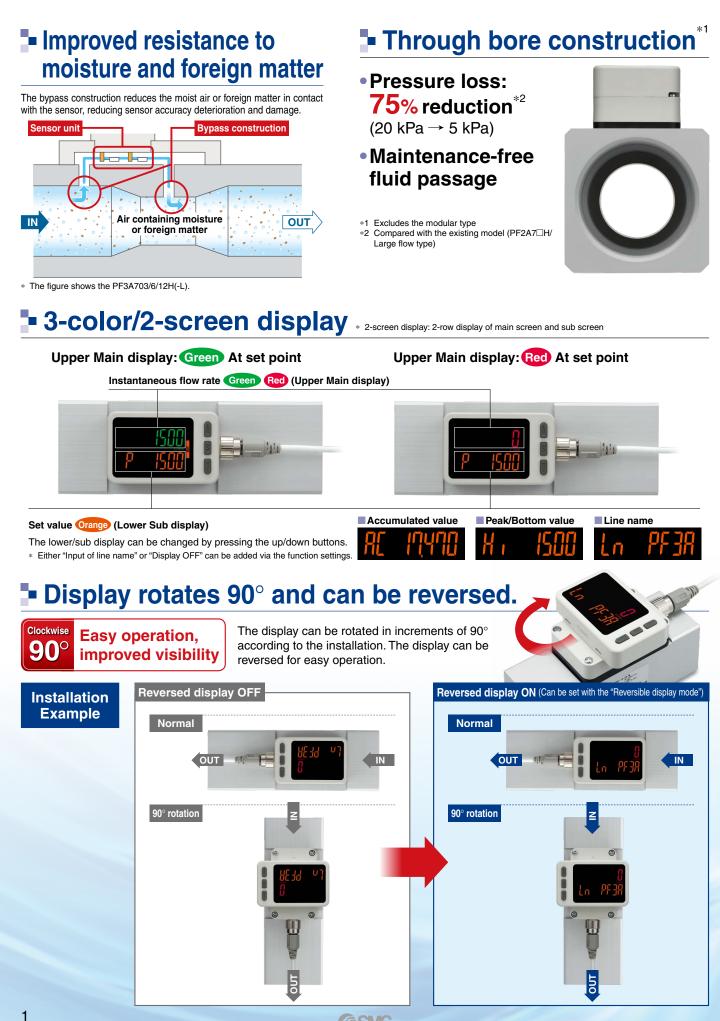

# 3-Screen Display Digital Flow Monitor

Allows for the monitoring of remote lines p.7

**SMC** 

# Smallest settable increment: **2** L/min

- \* For the PF3A703H
- 5 L/min for the existing model (PF2A703H/Large flow type)

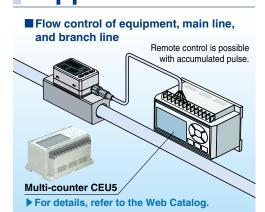

# Functions pp. 37 to 39

- Output operation
- Simple setting mode
- Display color
- Reference condition
- Response time (Digital filter)
- FUNC output switching function (Analog output ⇔ External input)
- Selectable analog output function
- External input function
- Forced output function
- Accumulated value hold
- Peak/Bottom value display
- Display OFF mode

- Setting of a security code
- Key-lock function
- Reset to the default settings
- Reversible display mode
- Zero cut-off function
- Delay time setting
- Selection of the display on the sub screen
- Analog output free range function
- Error display function
- Zero-clear function
- Display fine adjustment function
- Measurement display setting

# Application

Grease-free

# Select a digital flow switch to increase energy savings!

Flow control is necessary for promoting energy saving in any application. Saving energy starts from numerical control of the flow consumption of equipment and lines and clarification of the purpose and effect.

- Digital display allows visualization.
- 3-color/2-screen display, Improved visibility
- Remote control is possible with accumulated pulse.

# **Energy Saving Program**

For details, refer to the SMC website.

https://www.smcworld.com SMC Model Selection Software Search

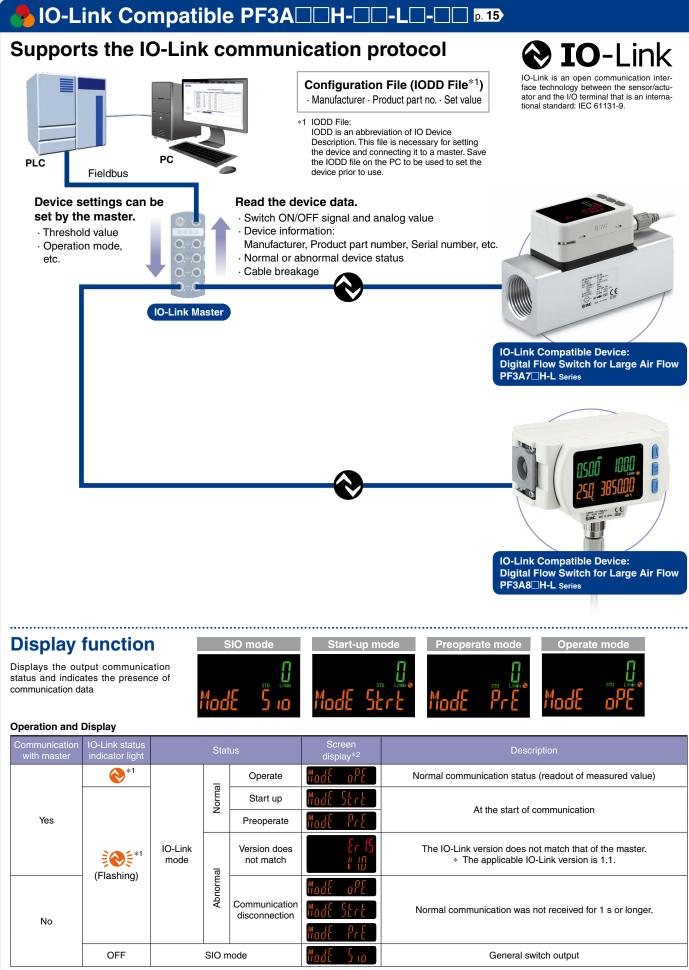

**Energy Saving Program** 

Allows you to perform various calculations necessary to improve the pneumatic energy saving.

Download the program Ver.4.1.02 2017/01/23 Update How to Install

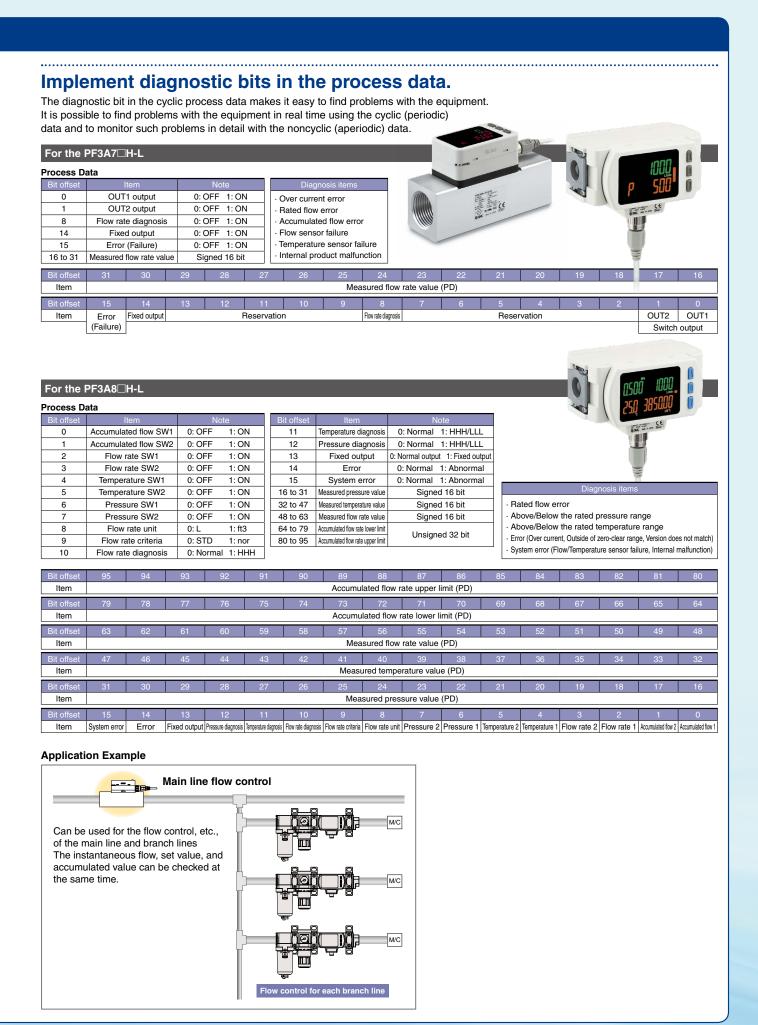

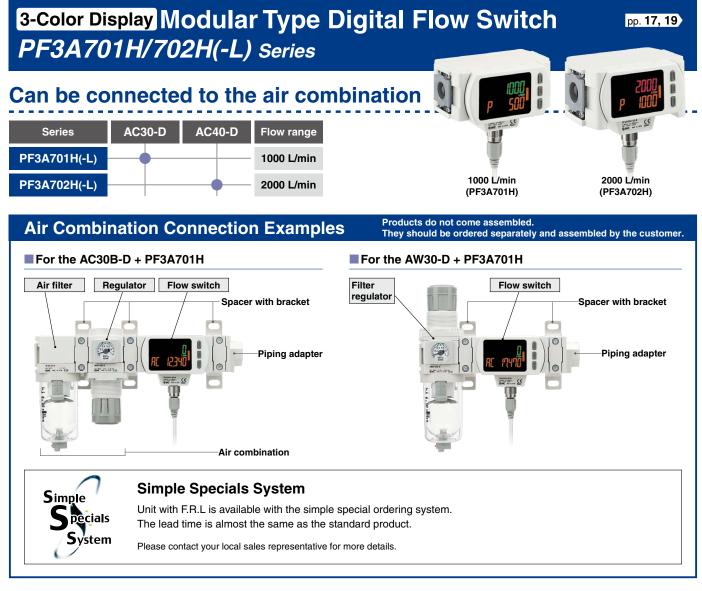

**SMC** 

\*1 In IO-Link mode, the IO-Link indicator is ON or flashing. \*2 When the lower line (sub screen) is set to mode display (Upper line for the PF3A8 H-L) \* "ModE LoC" is displayed when the data storage lock is enabled. (Except for when the version does not match or when in SIO mode)

The flow switch can be installed/removed without removing the piping.

Reduced maintenance time for inspection, cleaning, replacement, etc.

**GSMC** 

5

2000 L/min

# 3-color/4-screen display

Simultaneous measurement of the instantaneous flow rate, accumulated flow rate, pressure, and temperature

# Pressure sensor

Rated pressure range: 0 to 1 MPa

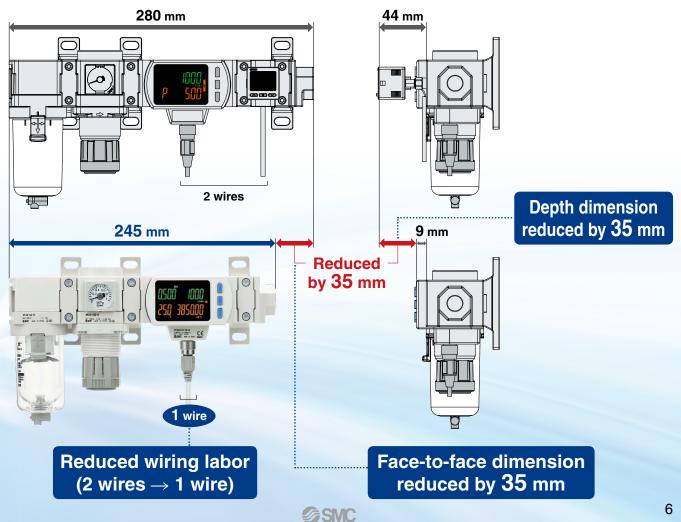

# Temperature sensor

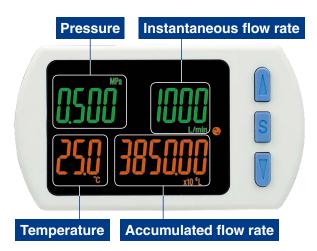

Rated temperature range: 0 to 50°C

# Space-saving design, Reduced labor

Both the flow rate and pressure can be measured with 1 product.

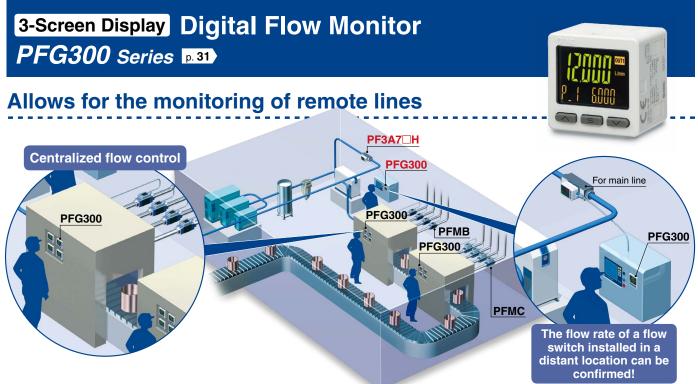

The installation of a digital pressure switch and a cross spacer is not necessary, thus reducing the face-to-face and depth dimensions. In addition, only 1 cable is required for wiring. This reduces the required installation space, piping, and wiring work.

(PF3A801H)

(PF3A802H)

# Visualization of settings

The sub screen (label) shows the item Existing mode to be set. Hysteresis mode Examples **PFG300** Ne ndow comparator mode Switches between displays Mode Always displayed on one screen

# Easy screen switching

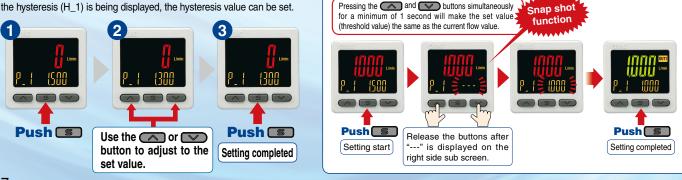

\* Either "Input of line name" or "Display OFF" can be added via the function settings.

With a snap shot function for set value reading

Pressing the And Web buttons simultaneously

# Simple 3-step setting

When the S button is pressed and the set value (P\_1) is being displayed, the set value (threshold value) can be set. When the S button is pressed and the hysteresis (H\_1) is being displayed, the hysteresis value can be set.

**SMC** 

# NPN/PNP switch function

The number of stock items can be reduced.

# Analog output of 0 to 10 V is also available.

Voltage	1 to 5 V	Switchable
output	output 0 to 10 V	
Current output	4 to 20 mA	Fixed

# **Convenient functions**

Copy function The settings of the master monitor can be copied to the slave monitors.

#### Security code

The key locking function keeps unauthorized persons from tampering with the settings.

#### Power saving mode

Power consumption is reduced by turning off the monitor.

:	·	
	Current consumption*1	Reduction rate*2
-	25 mA or less	Approx. 50% reduction
•	*1 During normal operation	*2 In power saving mode

# External input function

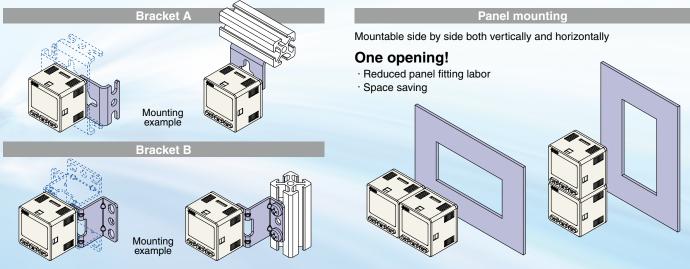

The accumulated value, peak value, and bottom value can be reset remotely.

# Functions pp. 40 to 42

- Output operation
- Simple setting mode
- Display color
- Delay time setting
- Digital filter setting
- FUNC output switching function
- Selectable analog output function • External input function
- Forced output function
- Accumulated value hold
- Peak/Bottom value display
- Setting of a security code
- Key-lock function
- Reset to the default settings
- Display with zero cut-off setting

# Mounting

The bracket configuration allows for mounting in four orientations.

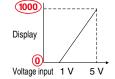

# Input range selection (for Pressure/Flow rate)

Display Voltage input 1 V 5 V Current input 4 mA 20 mA

(Voltage input: 1 to 5 V/Current input: 4 to 20 mA) Pressure switch/Flow switch can be displayed.

A is displayed for 1 V (or 4 mA). B is displayed for 5 V (or 20 mA). The range can be set as required.

#### Pressure Sensor for General Fluids/PSE570

	Α	В
PSE570	0	1000
<b>PSE573</b>	-100	100
<b>PSE574</b>	0	500

in the table above.

# Compact & Lightweight

Compact: Max. 6 mm shorter Lightweight: Max. 5 g lighter (30 g → 25 g)

- Selection of the display on the sub screen
- Analog output free range function
- Error display function Copy function
- Selection of power saving mode

**SMC** 

# The displayed value to the sensor input can be set as required.

Air quality grade is JIS B 8392-1:2012 [4:6:-] and ISO 8573-1:2010 [4:6:-]. \*1

Set point range will change according to the setting of the zero cut-off function.

\*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum update limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows: • 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years

- 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.
- When the pressure range is 1.0 to 1.5 MPa, the pressure characteristics will be  $\pm 5\%$  F.S. \*4
- (standard pressure is 0.5 MPa). Do not release the OUT side piping port of the product to the atmosphere without connecting piping. If the product is used with the piping port released to atmosphere, accuracy may vary. \*5 The time from when the flow is changed by a step input (when the flow rate
- changes from 0 to the maximum value of the rated flow range instantaneously) until the switch output turns ON (or OFF) when set to be 90% of the rated flow rate

- \*6 If the flow fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur.
- \*7 Analog output or external input can be selected by pressing the buttons.
- Refer to the graph for analog output. When selecting 0 to 10 V, refer to the analog output graph for the allowable load current. \*8

The time from when the flow is changed by a step input (when the flow rate \*9 changes from 0 to the maximum value of the rated flow range instantaneously) until the analog output reaches 90% of the rated flow rate
\*10 Analog output or external input can be selected by pressing the buttons.

- The flow rate given in the specifications is the value under standard conditions. \*11
- \*12 Setting is only possible for models with the units selection function.
- \*13 Display range will change according to the setting of the zero cut-off function. \*14

The accumulated flow display is the upper 6-digit and lower 6-digit (total of 12 digits) display. When the upper digits are displayed, x 10<sup>6</sup> lights up.

\* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

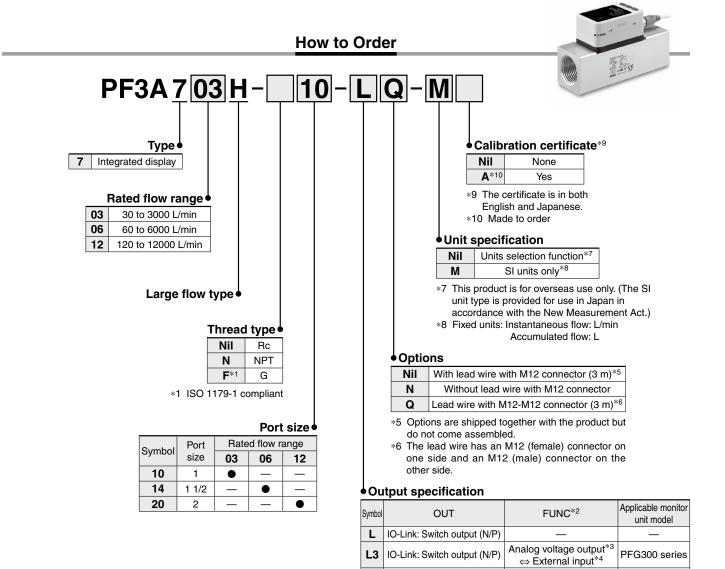

Body Ported Type PF3A□H(-L)

Modular Type PF3A H(-L)

**PFG300** 

Function Details

# Body Ported Type IO-Link 3-Color Display Digital Flow Switch FF3A7 H-L Series RoHS

L4

IO-Link: Switch output (N/P)

Analog output is set as default setting.

Options/Part Nos. When only optional parts are required, order with the part numbers listed below.

Part no.	Option	Note
ZS-37-4	Lead wire with M12 connector	Length: 3 m
ZS-49-4	Lead wire with M12-M12 connector	Male/female conversion, Length: 3 m

Output symbol "L" cannot be used as the FUNC terminal is not connected.
\*3 1 to 5 V or 0 to 10 V can be selected by pressing the button.

\*2 Analog output or external input can be selected by pressing the buttons.

Specifications

Set point range will change according to the setting of the zero cut-off function. \*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum update limit of the memory device is 1.5

- million times. If the product is operated 24 hours per day, the product life will be as follows: 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years
- 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.
- \*4 Do not release the OUT side piping port of the product to the atmosphere without connecting piping. If the product is used with the piping port released to atmosphere, accuracy may vary. The value when connecting a product with a port size of 3/8 (PF3A701H) or 1/2 (PF3A702H)
- \*5
- \*6 The value when the port size of the modular product is 3/8 (PF3A701H) or 1/2 (PF3A702H) and the product is operated at a supply pressure of 0.5 MPa
- The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum value of the rated flow range instantaneously) \*7 until the switch output turns ON (or OFF) when set to be 90% of the rated flow rate

- \*8 If the flow fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur. Analog output or external input can be selected by pressing the buttons.
- Refer to the graph for analog output. \*10 When selecting 0 to 10 V, refer to the analog output graph for the allowable
- load current.
- \*11 The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum value of the rated flow range instantane-ously) until the analog output reaches 90% of the rated flow rate
- Analog output or external input can be selected by pressing the buttons. \*12 \*13 The flow rate given in the specifications is the value under standard conditions.
- \*14 Setting is only possible for models with the units selection function.
- Display range will change according to the setting of the zero cut-off function. \*15
- The accumulated flow display is the upper 6-digit and lower 6-digit (total of \*16 12 digits) display. When the upper digits are displayed, x  $10^6$  lights up.
- Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

- \*1 Analog output accuracy is within  $\pm 3\%$  F.S. \*2 A and C will change according to the setting of the zero cutoff function.
- \*3 The analog output current from the connected equipment should be 20  $\mu$ A or less when selecting 0 to 10 V. When more than 20 µA current flows, it is possible that the accuracy is not satisfied below 0.5 V.
- \*4 The minimum value of the rated flow range will change according to the setting of the zero cut-off function.

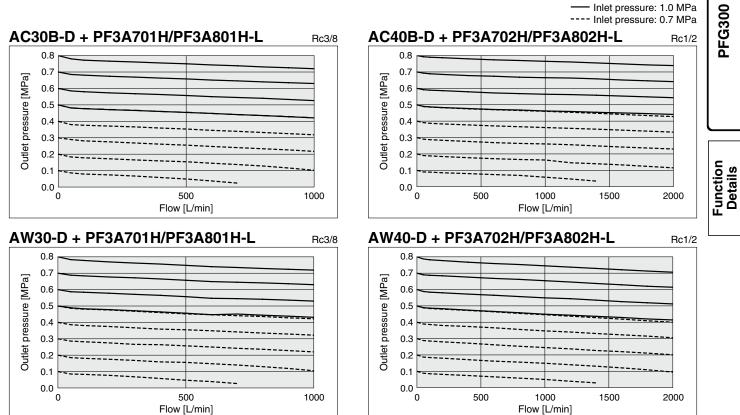

# Large Flow Type **B-COLOR Display** Digital Flow Switch **PF3A H(-L)** Series

# Flow Rate Characteristics (Reference Data)

SMC

\* This product cannot be used for applications in which the flow exceeds the rated flow range. Use caution when selecting a product.

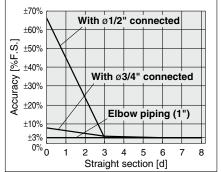

24

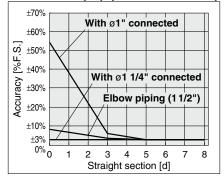

# **PF3A H(-L)** Series

# IN Side Straight Section and Accuracy (Reference Data)

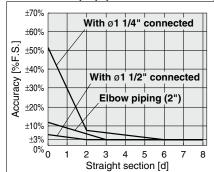

# PF3A703H(-L) (for 3000 L/min)

# PF3A706H(-L) (for 6000 L/min)

# PF3A712H(-L) (for 12000 L/min)

 Do not connect equipment or piping which may generate fluctuations in the flow or drift on the IN side of the product. When installing a regulator on the IN side of the product, make sure that chatter is not generated.

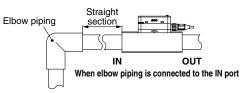

• The piping on the IN side must have a straight section of piping whose length is more than 8 times the piping I.D.

If a straight section of piping is not installed, the accuracy may vary by  $\pm 3\%$  F.S. or more. \* The "straight section" refers to a section of piping without any bends or rapid changes

in the cross sectional area.

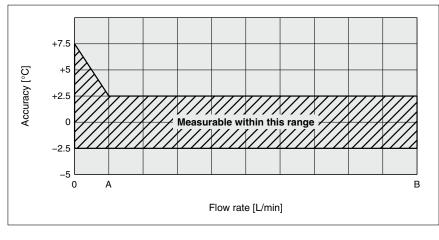

When piping of a different diameter is connected to the IN port

PF3A802H-L	200 L/min	2000 L/min

#### < Temperature Measurement >

When there is no (low) fluid flow, the heat of the platinum sensor heated for flow detection is transmitted to the temperature sensor, so the temperature measurement value in the low flow range (less than 10% of the rated flow rate) tends to increase in relation to the fluid temperature.

#### < Detection Principle (Flow) >

When a heated platinum sensor is installed in the branch passage, and fluid flows through it, the fluid removes heat from the platinum sensor. The resistance value of the platinum sensor decreases as it loses heat. As the resistance value decrease ratio has a uniform relationship to the fluid flow, the flow rate can be detected by measuring the resistance value.

\*1 Rated flow range of the applicable flow switch

\*2 Value without digital filter (at 0.00 s)

\*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum access limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows:

• 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years • 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life. \*4 If the flow fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur.

\*5 Setting is only possible for models with analog output.

\*6 Setting is only possible for models with external input.

\*7 Setting is only possible for models with the units selection function.

 $\ast 8$  The response time indicates when the set value is 90% in relation to the step input.

\*9 The accumulated flow display is the upper 6-digit and lower 6-digit (total of 12 digits) display. When the upper digits are displayed, x 10<sup>6</sup> lights up.

 Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products. PFG300

PFG300

Function Details

# **PF3A H(-L)** Series **Function Details**

The pressure and temperature settings are only available for the PF3A8 H-L series.

#### Output operation

The output operation can be selected from the following: Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow, pressure, and temperature, or output (accumulated output and pulse output) corresponding to accumulated flow

(Default setting: Hysteresis mode, Normal output)

#### Simple setting mode

Only the set values for instantaneous flow, accumulated flow, pressure, and temperature can be changed. The output mode, output type, display color, and accumulated pulse output cannot be changed.

#### Display color

The display color can be selected for each Green for ON, Red for OFF output status. The selection of the display Red for ON, Green for OFF color provides visual identification of abnormal values. Green all the time

#### Reference condition

The display unit can be selected from standard conditions or normal conditions. Standard conditions: Flow rate converted to a volume at 20°C and 101.3 kPa (absolute pressure) Normal conditions: Flow rate converted to a volume at 0°C and 101.3 kPa (absolute pressure)

#### Response time (Digital filter)

The response time (digital filter) can be set to suit the application. (Default setting: Flow rate: 1 s, Pressure: 0.1 s)

The effects of fluctuation and the flickering of the display can be reduced by changing the response time (digital filter).

FIOW Tale	Flessure	Temp.
1 s	0 to 30 s	
2 s	(Increments of	1 s
5 s	0.01 s)	

Red all the time

#### FUNC output switching function -

Analog output or external input can be selected. (Default setting: Analog output)

#### Selectable analog output function

1 to 5 V or 0 to 10 V can be selected for the analog voltage output type. (Default setting: 1 to 5 V)

# External input function

The accumulated flow, peak value, and bottom value can be reset remotely. Accumulated value external reset: The accumulated flow value is reset via external input signal.

In accumulated increment mode, the accumulated

value will reset to and increase from zero. In accumulated decrement mode, the accumulated

value will reset to and decrease from the set value.

\* When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory will be accessed. Take into consideration that the max. number of times the memory can be accessed is 1.5 million times. The total number of external inputs and the accumulated value memorizing time interval should not exceed 1.5 million times.

Peak/Bottom value reset: The peak value and bottom value are reset.

# Forced output function

The output is forced ON/OFF when starting the system or during maintenance. This enables confirmation of the wiring and prevents system errors due to unexpected output.

For the analog output type: When ON, the output will be 5 V or 20 mA, and when OFF, 1 V or 4 mA.

For the IO-Link compatible PF3A H-L series, diagnostic bit (error and flow rate) and process data (PD) flow measurement can be checked.

\* Also, the increase or decrease of the flow will not change the ON/OFF status of the output while the forced output function is activated.

# Accumulated value hold

The accumulated value is not cleared even when the power supply is turned OFF. The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned ON again.

The max. writable limit of the memory device is 1.5 million times, which should be taken into consideration.

For the setting of functions and operation methods, refer to the "Operation Manual" on the SMC website.

#### Peak/Bottom value display

The max. (min.) flow rate is detected and updated from when the power supply is turned ON. In peak (bottom) value display mode, this max. (min.) flow rate as well as the pressure and temperature are displayed.

# Display OFF mode

This function will turn the display OFF.

In the display OFF mode, three digits "\_ \_ \_ " on the right side of the sub display will flash.

If any button is pressed during this mode, the display reverts to normal for 30 seconds to allow the flow, pressure, temperature, etc., to be quickly checked. When a flow monitor (PFG300 series) is connected, the displayed values might be different due to an error. When a flow monitor display is to be used, it is recommended that this product be set to the display OFF mode.

#### Setting of a security code

The user can select whether a security code must be entered to release the key lock. At the time of shipment from the factory, it is set such that a security code is not required.

#### Key-lock function

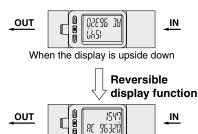

Prevents operation errors such as accidentally changing setting values

#### Reset to the default settings

The product can be returned to its factory default settings.

#### Reversible display mode

When the switch is used upside down, the orientation of the display can be rotated to make it easier to read by using the reversible display function.

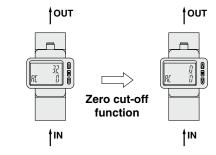

# ■ Zero cut-off function

When the flow is close to 0 L/min, the product will round the value down and zero will be displayed. A flow value may be displayed even when the flow rate is 0 L/min due to high pressure or depending on the installation. The zero cut-off function will force the display to zero. The range to display zero can be changed. (For the PF3A8 H-L series, the pressure is also subject to this function.)

90 96320

Example) Vertical mounting, Fluid direction: Bottom to top

# Delay time setting (PF3A H-L series only)

The time from when the instantaneous flow, pressure, and temperature reach the set values to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.

0 to 60 s (Increments of 0.01 s)

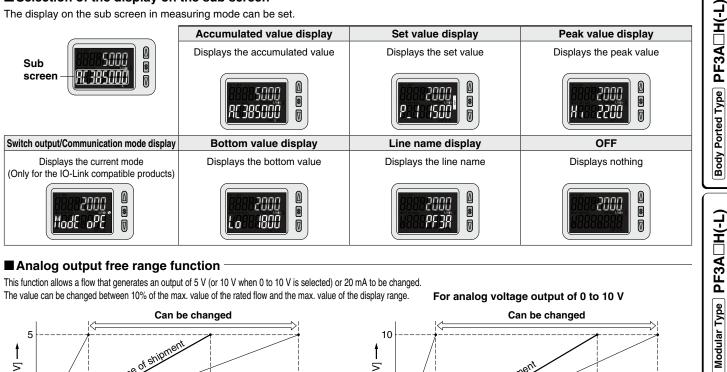

The total switching time is the switch operation time and the set delay time. (Default setting: 0 s)

Function Details **PF3A H(-L)** Series

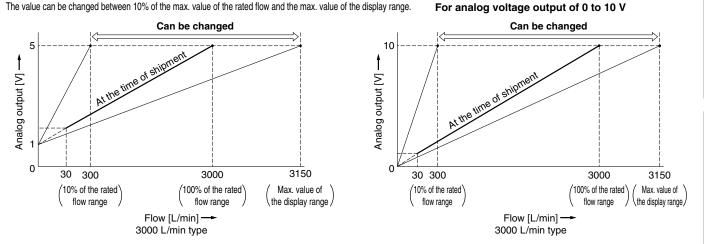

#### Selection of the display on the sub screen

The display on the sub screen in measuring mode can be set.

# Analog output free range function

This function allows a flow that generates an output of 5 V (or 10 V when 0 to 10 V is selected) or 20 mA to be changed. The value can be changed between 10% of the max. value of the rated flow and the max. value of the display range.

#### Error display function

When an error or abnormality arises, the location and contents are displayed.

Display	Error name	Description	Action	
<u> </u>	OUT over current error * Er2: PF3A8 -L series only	A load current of 80 mA or more has been applied to the switch output (OUT).	Eliminate the cause of the over current by turnin OFF the power supply and then turning it ON again	
ннн	Instantaneous flow error Pressure/Temperature error*1 *1 PF3A8□-L series only	The flow rate, pressure, or temperature exceeds the upper limit of the setting range.	Decrease the flow rate, pressure, or temperature.	
LLL	Pressure/Temperature error * PF3A8 -L series only	The pressure or temperature exceeds the lower limit of the setting range.	Increase the pressure or temperature.	
999999 (Flashing)	Accumulated flow error	The accumulated flow has exceeded the accumulated flow range. (For accumulated increment)	Reset the accumulated flow.	
🛿 (Flashing)	Accumulated flow error	The accumulated flow has reached the set accumulated flow value. (For accumulated decrement)	וופאבו וויב מטכעווועומופע ווטש.	
Er B	Outside of zero-clear range * PF3A8□-L series only	During zero-clear operation, a pressure of 7% F.S. or more has been applied. (The mode is returned to measurement mode after 1 s.)	Retry the zero-clear operation without pressure.	
Er0 Er4 Er5 Er7 Er8 Er10 Er12 Er14 Er14 Er40	System error	An internal data error has occurred.	Turn the power OFF and then ON again.	
Er 15	Version does not match * Only for the IO-Link compatible products	The IO-Link version does not match that of the master.	Ensure that the master IO-Link version matches the device version.	

If the error cannot be solved after the instructions above are performed, please contact SMC for investigation.

**PFG300** 

Function Details

# **PF3A** H(-L) Series

# Zero-clear function (PF3A8 H-L series only) -

This function clears and resets the zero value on the display of the measured pressure. The indicated value can be adjusted within  $\pm 7\%$  F.S. of the pressure at the time of shipment from the factory.

# Display fine adjustment function (PF3A8 H-L series only)

Fine adjustment of the indicated value of the pressure sensor can be made within the range of  $\pm 5\%$  of the read value. (This eliminates wide variations of the indicated value.)

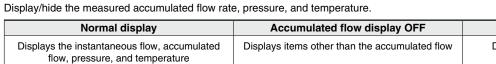

**Pressure display OFF** 

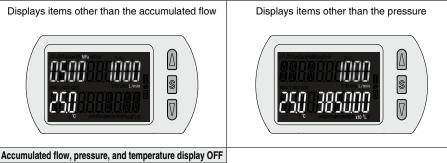

# ■Measurement display setting (PF3A8□H-L series only)

 $\square$ 

S

 $\overline{\mathbb{V}}$ 

Temperature display OFF

785

IANA

Displays items other than the temperature The accumulated flow display changes from 6 digits to 9 digits.

# **PFG300** Series Function Details

# Output operation

The output operation can be selected from the following: Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow or output (accumulated output and pulse output) corresponding to accumulated flow

(Default setting: Hysteresis mode, Normal output)

#### Simple setting mode

Only the set values for instantaneous flow and accumulated flow can be changed. The output mode, output type, display color, and accumulated pulse output cannot be changed.

# ■ Display color

The display color can be selected for each output status. The selection of the display color provides visual identification of abnormal values.

Green for ON, Red for OFF
Red for ON, Green for OFF
Red all the time
Green all the time

#### Delay time setting

The time from when the instantaneous flow reaches the set value to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.

(Default setting: 0 s)

0.00 s
0.05 to 0.1 s (Increments of 0.01 s)
0.1 to 1.0 s (Increments of 0.1 s)
1 to 10 s (Increments of 1 s)
20 s
30 s
40 s
50 s
60 s

# Digital filter setting

The time for the digital filter can be set to the sensor input. Setting the digital filter can reduce chattering of the switch output and flickering of the analog output and the display.

0.00 s
0.05 to 0.1 s (Increments of 0.01 s)
0.1 to 1.0 s (Increments of 0.1 s)
1 to 10 s (Increments of 1 s)
20 s
30 s

The response time indicates when the set value is 90% in relation to the step input.

(Default setting: 0 s)

# FUNC output switching function

Analog output, external input, or copy function can be selected. (Default setting: Analog output)

# Selectable analog output function

1 to 5 V or 0 to 10 V can be selected for the analog voltage output type. (Default setting: 1 to 5 V)

# External input function

The accumulated flow, peak value, and bottom value can be reset remotely. Accumulated value external reset: The accumulated flow value is reset via external input signal.

- In accumulated increment mode, the accumulated value will reset to and increase from zero.
- In accumulated decrement mode, the accumulated
- value will reset to and decrease from the set value.
- \* When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory will be accessed. Take into consideration that the max. number of times the memory can be accessed is 1.5 million times. The total number of external inputs and the accumulated value memorizing time interval should not exceed 1.5 million times.

Peak/Bottom value reset: The peak value and bottom value are reset.

For the setting of functions and operation methods, refer to the "Operation Manual" on the SMC website.

#### Forced output function

The output is forced ON/OFF when starting the system or during maintenance. This enables confirmation of the wiring and prevents system errors due to unexpected output.

For the analog output type: When ON, the output will be 5 V (or 10 V when 0 to 10 V is selected) or 20 mA, and when OFF, 1 V (or 0 V when 0 to 10 V is selected) or 4 mA.

\* Also, the increase or decrease of the flow will not change the ON/OFF status of the output while the forced output function is activated.

#### Accumulated value hold

The accumulated value is not cleared even when the power supply is turned OFF. The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned ON again.

The max. writable limit of the memory device is 1.5 million times, which should be taken into consideration.

#### Peak/Bottom value display -

The max. (min.) flow rate is detected and updated from when the power supply is turned ON. In peak (bottom) value display mode, this max. (min.) flow rate is displayed.

# Setting of a security code

The user can select whether a security code must be entered to release the key lock. At the time of shipment from the factory, it is set such that a security code is not required.

#### Key-lock function

Prevents operation errors such as accidentally changing setting values

# Reset to the default settings

The product can be returned to its factory default settings.

# Display with zero cut-off setting

When the flow is close to 0 L/min, the product will round the value down and zero will be displayed. A flow value may be displayed even when the flow rate is 0 L/min due to high pressure or depending on the installation. The zero cut-off function will force the display to zero. The range to display zero can be changed.

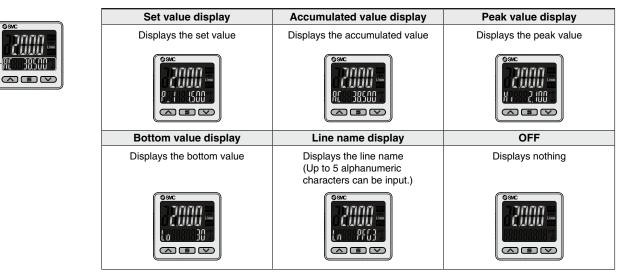

PFG300

# **PFG300** Series

Sub screen

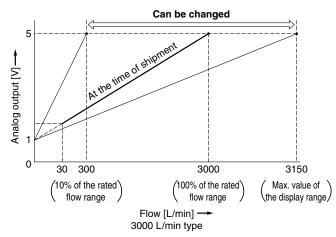

# Selection of the display on the sub screen

The display on the sub screen in measuring mode can be set.

# Analog output free range function

This function allows a flow that generates an output of 5 V (or 10 V when 0 to 10 V is selected) or 20 mA to be changed. The value can be changed between 10% of the max. value of the rated flow and the max. value of the display range.

For analog voltage output of 0 to 10 V Can be changed 10 Analog output [V] the 0 30 300 3000 3150 100% of the rated /10% of the rated \ Max. value of the display range flow range flow range Flow [L/min] -3000 L/min type

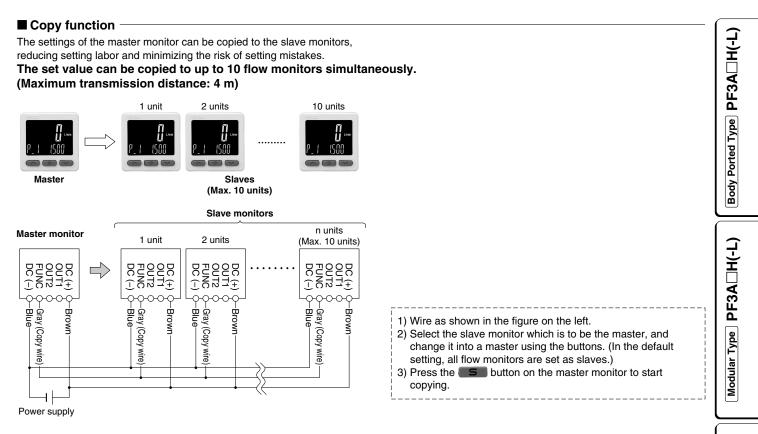

# Error display function

When an error or abnormality arises, the location and contents are displayed.

Display	Error name	Description	Action	
Er 1 Er 2	OUT over current error	A load current of 80 mA or more has been applied to the switch output (OUT).	Eliminate the cause of the over current by turning OFF the power supply and then turning it ON again.	
ннн	Instantaneous flow error	The flow rate exceeds the max. value of the display range.	Decrease the flow rate.	
LLL	Reverse flow error	There is a reverse flow equivalent to –5% or more. (Except PF3A7⊟H series)	Change the flow to the correct direction.	
x 10 <sup>6</sup>	Accumulated flow error	The flow rate exceeds the accumulated flow rate range.	Clear the accumulated flow rate.	
Er0 Er4 Er5 Er7 Er8 Er8 Er14 Er40	System error	An internal data error has occurred.	Turn the power OFF and then ON again.	
Er 13	Copy error	The copy function does not operate properly.	After clearing the error by pressing the and v buttons simultaneously for a minimum of 1 second, check the wiring and the model, and then attempt to copy again.	

SMC

If the error cannot be solved after the instructions above are performed, please contact SMC for investigation.

# Selection of power saving mode

The power saving mode can be selected.

With this function, if no buttons are pressed for 30 s, it shifts to power saving mode.

At the time of shipment from the factory, the product is set to the normal mode (the power saving mode is turned off).

(During power saving mode, [ECo] will flash in the sub screen and the operation light will be ON (only when the switch is ON).)

\* There may be a difference in the displayed value on the connected flow switch and the flow monitor. When the flow monitor display is being used, it is recommended to set the flow switch display to OFF mode.

**PFG300** 

# ▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "**Caution**," "**Warning**" or "**Danger**." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)<sup>\*1</sup>, and other safety regulations.

- Caution: indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

# **A**Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
  - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
  - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
  - Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

# 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

- 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
- 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
- 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

- \*1) ISO 4414: Pneumatic fluid power General rules relating to systems.
  - ISO 4413: Hydraulic fluid power General rules relating to systems. IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
  - ISO 10218-1: Manipulating industrial robots Safety. etc.

# 

 The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand

and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

# Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

# Limited warranty and Disclaimer

- The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

# **Compliance Requirements**

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

# 

# SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.
